*B.A. Dance,
B.S. Mathematics*

Minor: Psychology

*Mentors:
Daniele Struppa, Ph.D.,
Dale Merrill, Ph.D.*

Math and Dance: Infinitely Intertwining

Math and dance are unique disciplines and some would even go so far as to say they are completely unrelated. But in my experience, it is quite the opposite. Math and dance cannot only be intertwined in a number of ways, but actually rely heavily upon one another. They also utilize similar concepts, such as creativity and analytical skills, and therefore both teach students to think in new and different ways. Math and dance are interdisciplinary subjects that whether separate or combined offer new and exciting possibilities.
