THE LIMITS OF SECOND AMENDMENT ORIGINALISM AND THE CONSTITUTIONAL CASE FOR GUN CONTROL

*Lawrence Rosenthal**

The Second Amendment is the only provision in the Bill of Rights with a preamble: “A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed.”¹ The relationship between the Second Amendment’s preamble and its operative clause is far from obvious; yet, it has critical implications for the future of gun control.

For decades, Second Amendment jurisprudence was dominated by *United States v. Miller*,² in which the Court rejected a constitutional attack on a federal statute prohibiting the interstate transportation of a short-barrel shotgun by observing that a short-barrel shotgun has no “relationship to the preservation or efficiency of a well regulated militia.”³ Lower courts generally read *Miller* to foreclose claims that the Second Amendment protected an individual right to keep and bear arms for purposes unrelated to military service; as one commentator put it, most lower courts “invoke[d] *Miller* with vehemence and regularity in dismissing, out of hand, challenges to the various pieces of gun control legislation”⁴

SECOND AMENDMENT ORIGINALISM

This changed with the 5-4 decision in *District of Columbia v. Heller*.⁵ Assessing the constitutionality of an ordinance banning the possession of handguns and requiring that firearms remain unloaded and disassembled or locked, the Court began by stating its interpretive methodology:

[W]e are guided by the principle that “[t]he Constitution was written to be understood by the voters; its words and phrases are to be used in their normal and ordinary as distinguished from technical meaning.” Normal meaning may of course include an idiomatic meaning, but it excludes secret or technical meanings that would not have been known to ordinary citizens in the founding generation.⁶

Relying on evidence of the meaning of the terms of the Second Amendment in the framing era, the Court concluded that the “right of the People” referred to an individual right,⁷ while “Arms” included “all instruments that constitute bearable arms, even those that were not in existence at the time of the founding,”⁸ but excluded “dangerous and unusual weapons.”⁹ The right to “keep” arms, the Court concluded, meant the right to possess them,¹⁰ and the right to “bear” arms meant the right to “carry[] for a particular purpose – confrontation.”¹¹ As for the preamble, the Court concluded that it would not have been understood in the framing era to “limit or expand the scope of the operative clause,” but instead merely “announce[d] the purpose for which the right was codified: to prevent elimination of the militia.”¹² As for *Miller*, the Court concluded that it should be understood as holding “only that the Second Amendment does not protect those weapons not typically possessed by law-abiding citizens for lawful purposes, such as short-barreled shotguns.”¹³ The Court then held that the right to keep and bear arms was infringed by the District’s prohibition on the registration and possession of handguns,¹⁴ as well as its requirement that firearms be locked or otherwise stored in an inoperable condition.¹⁵

SECOND AMENDMENT ORIGINALISM

At first blush, *Heller*'s originalist methodology appears to embrace a largely unqualified right of every person to possess and carry any firearm in common civilian use. Its significance grew when, two years later, the Court concluded that the Second Amendment's protections are fully applicable to state and local gun-control laws by virtue of the Fourteenth Amendment.¹⁶ *Heller*'s importance was methodological as well. Justice Scalia, the author of *Heller*, has long been an advocate of originalist approaches to constitutional interpretation.¹⁷ His advocacy of originalism, which "regards the discoverable meaning of the Constitution at the time of its initial adoption as authoritative for purposes of constitutional interpretation in the present,"¹⁸ is ultimately premised on his view about the proper way to divine the meaning of a text: "Originalism remains the normal, natural approach to understanding anything that has been said or written in the past."¹⁹ Treating legal rules as having evolving content to be fleshed out by judicial decision, Justice Scalia has added, "is preeminently a common-law way of making law, and not the way

[M]ost or almost all originalists agree that original meaning was fixed or determined at the time each provision of the Constitution was framed or ratified. We might call this idea *the fixation thesis*. It is no surprise that originalists agree on the fixation thesis. The term "originalism" was coined to describe a family of textualist and intentionalist approaches to constitutional interpretation and construction that were associated with phrases like "original intentions," "original meaning," and "original understanding." These phrases and the word "originalist" share the root word "origin." The idea that meaning is fixed at the time of origination for each constitutional provision serves as the common denominator for all of these expressions.

Lawrence B. Solum, *What Is Originalism? The Evolution of Contemporary Originalist Theory*, in *THE CHALLENGE OF ORIGINALISM: THEORIES OF CONSTITUTIONAL INTERPRETATION* 12, 33 (Grant Huscroft & Bradley W. Miller eds., 2011) [hereinafter *THE CHALLENGE OF ORIGINALISM*]. Justice Scalia has similarly described originalism as the consequence of what he has called the "Fixed-Meaning Canon": "Words must be given the meaning they had when the text was adopted." of construing a democratically adopted text.”²⁰ In this, Justice Scalia is not alone; originalists, whatever their differences, frequently defend their methodology as the proper approach for ascertaining the meaning of a legal text.²¹

Heller has been called “the most explicitly and self-consciously originalist opinion in the history of the Supreme Court.”²² *Heller* offered Justice Scalia an inviting opportunity to inject originalism into constitutional adjudication; although Justice Scalia is reluctant to repudiate well-settled nonoriginalist precedent by virtue of his respect for the doctrine of stare decisis,²³ Second Amendment

jurisprudence was unencumbered by numerous nonoriginalist precedents. By cabining *Miller*—the only important Second Amendment precedent before *Heller*—as a case about unusual weapons, Justice Scalia had little difficulty in concluding that “nothing in our precedents forecloses our adoption of the original understanding of the Second Amendment.”²⁴ Accordingly, the path was clear to an originalist Second Amendment jurisprudence.

In *Heller*, the Court pointedly refused to adopt any standard of judicial scrutiny by which a challenged gun-control law could be tested to determine if it was sufficiently justified, although it did reject the view that a challenged regulation need only to have a rational basis, as well as the interest-balancing test Justice Breyer advocated in dissent.²⁵ Given *Heller*’s originalism, this should be unsurprising; neither the majority nor the dissenters identified any evidence that the original understanding of the Second Amendment included a standard of scrutiny by which courts could determine whether a challenged regulation was adequately justified.²⁶ Thus, *Heller* seemed to promise the dawn of Second Amendment originalism unencumbered by the balancing tests and standards of scrutiny common in other areas of constitutional law, but lacking originalist grounding.

Commentators have provided many helpful, if often conflicting, assessments of *Heller*’s conclusions regarding the original meaning of the Second Amendment.²⁷ This article takes

SECOND AMENDMENT ORIGINALISM

Heller's conclusions as given, but questions whether they have produced—or even could produce—an authentically originalist Second Amendment jurisprudence. Much less scholarly attention has been paid to the Second Amendment jurisprudence emerging in *Heller's* wake. This article takes *Heller's* conclusions about the original meaning of the Second Amendment as given, and assesses whether they have produced—or even are capable of producing—an authentically originalist Second Amendment jurisprudence. In *Heller's* wake, the outlines of a new jurisprudence – one that countenances surprisingly robust regulatory authority and in which originalism plays a surprisingly limited role – are starting to come clear. The discussion that follows seeks to explicate and defend this emerging jurisprudence in terms of the relationship between the Second Amendment's preamble and its operative clause. It explores as well the constitutional case for a robust regime of gun control.

Part I examines the problems with *Heller's* effort to ground constitutional adjudication in the original meaning of constitutional text. As Part I explains, nonoriginalism lurks in *Heller*, which helps to explain why lower courts have increasingly utilized the type of balancing tests and standards of scrutiny seemingly eschewed by *Heller*. Part II reviews and ultimately dismisses the efforts to salvage an originalist Second Amendment jurisprudence after *Heller*, casting doubt on the utility of originalism to produce a coherent Second Amendment jurisprudence. Part III then offers an account that accommodates both the right recognized in *Heller* and comprehensive regulatory power over firearms, by focusing on the relationship between the Second Amendment's preamble and its operative clause. It concludes that there is a textual basis in the Second Amendment for both firearms rights and regulation, while acknowledging that there is little in the original meaning of the Second Amendment that helps to identify the boundary between rights and regulatory authority. Instead, Part III argues that common-law methodology—what originalists often call

constitutional construction and nonoriginalists celebrate as living constitutionalism— is up to the task. Existing nonoriginalist constitutional doctrine supplies the framework for constructing a post-*Heller* Second Amendment jurisprudence. Part III then applies this framework and demonstrates that the Second Amendment poses little obstacle to comprehensive firearms regulation.

I. THE UNRAVELING OF *HELLER*'S SECOND AMENDMENT ORIGINALISM

At first blush, *Heller*'s account of the Second Amendment seems straightforwardly hostile towards firearms regulation. The Court concluded that the right to keep and bear arms was originally understood as an “individual right to possess and carry weapons in case of confrontation.”²⁸ Although the Court offered no account of the original meaning of an “infringe[ment]” of this right, the first edition of Webster's *American Dictionary of the English Language*, which Justice Scalia frequently consults to ascertain the original meaning of eighteenth-century constitutional text,²⁹ including in *Heller* itself,³⁰ defined “infringe” as “[b]roken, violated, transgressed.”³¹ Other framing-era sources are to similar effect.³² Accordingly, the original meaning of the command in the Second Amendment's operative clause that the right to keep and bear arms “shall not be infringed” suggests that no individual can be denied the right to possess or carry firearms in common civilian use in case of confrontation. Thus, some have argued that the original meaning of the Second Amendment contemplates an expansive right to possess and carry arms.³³

SECOND AMENDMENT ORIGINALISM

Yet, much in *Heller* actually suggests that the original meaning of the Second Amendment's operative clause tells us little about the scope of permissible firearms regulation. This becomes clear through an examination of *Heller*'s discussion of permissible firearms regulation, its precise holding, and its application in the lower courts.

A. *Heller's Dicta On Permissible Firearms Regulation*

Heller went to some lengths to emphasize that limitations on the right to keep and bear arms, that is, to possess and carry firearms in case of confrontation, are consistent with the Second Amendment. The Court wrote: "Like most rights, the right secured by the Second Amendment is not unlimited."³⁴ "For example," the Court observed, "the majority of 19th-century courts to consider the question held that prohibitions on carrying concealed weapons were lawful under the Second Amendment or its state analogues."³⁵ Moreover, "nothing in our opinion should be taken to cast doubt on longstanding prohibitions on the possession of firearms by felons or the mentally ill, or laws forbidding the carrying of firearms in sensitive places such as schools or government buildings, or laws imposing conditions and qualifications on the commercial sale of arms."³⁶ The Court added that it "identif[ied] these presumptively lawful regulatory measures only as examples; our list does not purport to be exhaustive."³⁷

A number of respected commentators have doubted that *Heller*'s list of "presumptively lawful" regulatory measures reflects the original meaning of the Second Amendment.³⁸ Indeed,

³⁷ *Id.* at 627 n.26. When the Court subsequently concluded that the Second Amendment is applicable to state and local governments through the Fourteenth Amendment, four of the five Justices in the majority referred to *Heller*'s discussion of presumptively lawful regulations, stating: "We repeat those assurances here. Despite municipal respondents' doomsday proclamations, incorporation does not imperil every law regulating firearms." *McDonald v. City of Chi.*, 561 U.S. 742, 786 (2010) (plurality opinion).

Even *Heller*'s exclusion of "dangerous and unusual" weapons from Second Amendment protection has questionable historical support. See Lund, *supra* note 27, at 1362-64.

the Court's discussion of presumptively lawful gun-control measures is in considerable tension with its conclusions regarding the original meaning of the Second Amendment's operative clause. For example, if the operative clause recognizes an individual right to possess and carry in case of confrontation all firearms in common civilian use, then there would seemingly be no textual basis to deprive some individuals of that right on the basis of a prior conviction or mental illness; or to prevent individuals from exercising the right to carry firearms if concealed or in "sensitive places." While there may be good policy reasons for such regulations, *Heller* states that "[c]onstitutional rights are enshrined with the scope they were understood to have when the people adopted them, whether or not future legislatures or (yes) even future judges think that scope too broad."³⁹ As such, *Heller*'s originalism breaks down. There may be some basis on which to sustain the regulations that *Heller* describes as presumptively lawful, but it cannot be found in *Heller*'s account of the original meaning of the Second Amendment's operative clause.

Yet, it may be perilous to place too much weight on *Heller*'s discussion of presumptively lawful gun control. This discussion was, after all, only dicta unnecessary to the Court's holding inasmuch as *Heller* sought only "to enjoin the city from enforcing the bar on the registration of handguns . . . and the trigger-lock requirement insofar as it prohibits the use of 'functional firearms within the home.'"⁴⁰ Moreover, in its discussion of presumptively lawful regulations, the Court acknowledged that it "d[id] not undertake an exhaustive historical analysis . . . of the full scope of the Second Amendment," and added that "there will be time enough to expound upon the historical justifications for the exceptions we have mentioned if and when those exceptions come before us."⁴¹ At most, *Heller*'s dicta erects a presumption that can presumably be rebutted. Still, *Heller*'s precise holding, no less than its dicta on permissible firearms regulation, reflects the limits of Second Amendment originalism, as we shall now see.

B. *Heller's Holding*

Since *Heller* explained that the Second Amendment's operative clause conferred an individual right to possess and carry in case of confrontation any firearm in common civilian use, it should have been a simple matter to invalidate the District of Columbia's prohibition on the possession of handguns and their carrying and

SECOND AMENDMENT ORIGINALISM

use within the home. If one has the right to possess and carry in case of confrontation any firearm in common civilian use, then the invalidity of the challenged regulations should have been plain. The Court's precise holding, however, was not nearly so straightforward.

The Court introduced its discussion of the challenged ordinance by observing that “the inherent right of self-defense has been central to the Second Amendment right,” adding that the District of Columbia’s “handgun ban amounts to a prohibition on an entire class of ‘arms’ that is overwhelmingly chosen by American society for that lawful purpose,” and that the ban “extends, moreover, to the home, where the need for defense of self, family, and property is most acute.”⁴² The Court noted that “[f]ew laws in the history of our Nation have come close to the severe restriction of the District of Columbia’s handgun ban. And some of them have been struck down.”⁴³ Inasmuch as “the American people have considered the handgun to be the quintessential self-defense weapon,” it follows, the Court wrote, that “a complete prohibition on their use is invalid.”⁴⁴ As for the trigger-lock requirement, because it required that “firearms in the home be kept inoperable at all times,” this prohibition “makes it impossible for citizens to use them for the core lawful purpose of self-defense and is hence unconstitutional.”⁴⁵

Thus, the Court invalidated the District’s ordinance not on the ground that the Second Amendment forbids any limitations on the right to possess and carry firearms in common civilian use, but because the District’s ordinance imposed a particularly severe burden on the right of armed defense. Some commentators have argued that *Heller* is best read as protecting a core right to possess and use firearms for lawful defense of the home, while leaving open the possibility of greater restrictions on liberty interests at a distance from that core right.⁴⁶ Indeed, it is plain that the Court regarded lawful, armed defense as the core of the Second Amendment right; it described lawful self-defense as “the *central component* of the right itself” and the Amendment’s “core lawful purpose,” and concluded that the Amendment “surely elevates above all other interests the right of law-abiding, responsible

citizens to use arms in defense of hearth and home.”⁴⁷ The Court even adverted to the burden imposed by the challenged regulations, contrasting it to the more modest burden imposed by framing-era regulations.⁴⁸ For present purposes, however, what is most significant is that none of this can be deduced from the Court’s explication of the original meaning of the Second Amendment’s text, which says not a word about self-defense or the importance of hearth and home.⁴⁹ Instead, according to *Heller*, the original meaning of the right to “keep and bear arms” was to confer an individual right to possess and carry in case of confrontation firearms in common civilian use. *Heller*’s discussion of the centrality of the defense of the home to the Second Amendment has no apparent footing in the original meaning of the Second Amendment’s operative clause.⁵⁰

C. *Heller in the Lower Courts*

Heller’s focus on the original meaning of the Second Amendment’s operative clause suggests that in applying it, courts need only ask whether a challenged regulation infringes an individual’s right to possess and carry firearms in common civilian use. Yet, original meaning has rarely played a decisive role in the Second Amendment jurisprudence that has developed in the lower courts following *Heller*.

One obstacle to judicial reliance on original meaning when assessing the validity of a challenged regulation is that courts often find the relevant historical evidence to be uncertain or inconclusive.⁵¹ Beyond that, serious difficulties lurk in defining

⁴⁸ *Id.* at 632 (noting that framing-era firearms safety laws “d[id] not remotely burden the right of self-defense as much as an absolute ban on handguns”).

⁴⁹ To be sure, the text refers, in the preamble, to “[a] well regulated militia being necessary to the security of a free State,” U.S. CONST. amend. II, which the Court acknowledged was a reference not to an individual right of self-defense, but “meant ‘security of a free polity.’” 554 U.S. at 597.

⁵⁰ One might argue that the text’s reference to a right to “bear” arms implies a right to carry firearms only for lawful purposes, but *Heller* undermines that view. The Court adopted a definition of the term “bear” first advanced by Justice Ginsburg in a case interpreting a federal statute that provides for an enhanced sentence for individuals who carry a firearms during the commission of a crime, *Heller*, 554 U.S. at 584 (citing *Muscarello v. United States*, 524 U.S. 125, 143 (1998) (Ginsburg, J., dissenting)), and concluded that the phrase “bear arms” “implies that the carrying of the weapon is for the purpose offensive or defensive action” *Id.* (internal quotations omitted).

SECOND AMENDMENT ORIGINALISM

Second Amendment rights by reference to *Heller*'s definition of the right to keep and bear arms.

First, an effort to define the scope of Second Amendment protection in terms of the original meaning of the operative clause could in many cases inappropriately circumscribe constitutional protection. Some regulations, such as laws prohibiting the sale of ammunition, or target practice, do not by their terms infringe the right to “keep” or “bear” “arms” under the original meaning of those terms as defined in *Heller*, yet could impose enormous and unjustified burdens on Second Amendment rights.⁵² Indeed, such laws have been invalidated since *Heller*.⁵³ Yet, nothing in the original meaning of the Second Amendment's operative clause as articulated in *Heller* offers a methodology for determining what types of burdens on the right to keep and bear arms are impermissible.

Second, a focus on the original meaning of the operative clause does little to explain *Heller*'s discussion of permissible firearms regulation. *Heller*'s discussion of presumptively valid regulation has no apparent basis in the original meaning of the operative clause, but it does suggest that the Second Amendment preserves considerable regulatory power. Indeed, a number of courts have reasoned that regulations that fall within the categories branded presumptively lawful in *Heller* should be sustained even when they prevent individuals from possessing or carrying firearms in common civilian use.⁵⁴ Still, there are perils in placing too much

weight on this dicta, and a number of courts have refused to treat it as dispositive.⁵⁵ Yet, *Heller*'s precise holding seems to rest on the extent to which the District of Columbia's ordinance burdened a core constitutional interest in armed defense of the home, even though this approach has no apparent grounding in the original meaning of the Second Amendment's operative clause.

In light of *Heller*'s apparent focus on the extent to which a challenged regulation impairs a core Second Amendment interest in lawful armed defense, a number of scholars have argued that it is best understood as requiring inquiry into the extent to which a challenged regulation burdens core Second Amendment rights as compared to its regulatory justification, though none have claimed any basis for this approach in the original meaning of the Second Amendment's operative clause.⁵⁶ Others have offered alternate proposals to govern judicial review of challenged gun-control laws, including enhanced rational-basis review,⁵⁷ a stringent form

of reasonableness review,⁵⁸ clear and convincing evidence that a challenged regulation enhances safety,⁵⁹ intermediate scrutiny requiring that the government demonstrate the substantial efficacy of a challenged regulation,⁶⁰ or strict scrutiny for regulations that implicate core Second Amendment interests and some form of balancing test for other challenged laws.⁶¹ Notably, none of these proposals claim any footing in the original meaning of the Second Amendment as described in *Heller*.

Indeed, originalism has had a limited role in post-*Heller* Second Amendment litigation; the emerging consensus in the lower courts uses original meaning only as a threshold test which screens out some claims, but contemplates that even laws that limit the extent to which individuals can exercise the textually-recognized right to keep and bear arms may be sustained upon sufficient justification. The prevailing approach involves a two-pronged inquiry:

The first question is “whether the challenged law imposes a burden on conduct falling within the scope of the Second Amendment's guarantee.” This historical inquiry seeks to determine whether the conduct at issue was understood to be within the scope of the right at the time of ratification. If it was not, then the challenged law is valid. If the challenged

regulation burdens conduct that was within the scope of the Second Amendment as historically understood, then we move to the second step of applying an appropriate form of means-end scrutiny.⁶²

The first prong of this test is ostensibly originalist, although it functions only to weed out claims that are considered outside the scope of constitutional protection. Accordingly, historical evidence is never alone sufficient to sustain a Second Amendment claim. Instead, if the first prong is satisfied, courts proceed to means-end scrutiny. Thus, in actual practice, the first prong, while ostensibly focused on historical evidence of original meaning, operates only to defeat Second Amendment claims.⁶³

As for the second prong, there is some diversity of opinion about the appropriate character of means-end scrutiny. The vast majority of appellate decisions to consider the question have rejected the claim that regulations limiting the ability to keep and bear arms in common civilian use are necessarily subject to strict scrutiny, in which a challenged regulation can be sustained only if it is narrowly tailored to achieve a compelling governmental interest.⁶⁴ To be sure, *Heller* suggests that very serious burdens on

core Second Amendment rights trigger strict scrutiny, if not *per se* invalidation. Lower courts have accommodated the point with essentially two approaches. Some have concluded all but the most serious burdens should be evaluated under a form of intermediate scrutiny, in which a challenged regulation is permissible when substantially related to an important governmental objective, and have applied this test in the vast majority of cases to uphold even laws that limit the ability to possess or carry firearms in common civilian use.⁶⁵ Others have taken a more flexible approach in

which laws imposing more onerous burdens on the right to keep or bear firearms should be subject to concomitantly more demanding scrutiny, but still frequently uphold such laws.⁶⁶ In either case, analysis centers on the extent to which a challenged law burdens the core interest in armed defense, without any claim that this type of inquiry is rooted in original meaning. Accordingly, the second prong of this test contains two analytically distinct steps, in which the extent of the burden on the right of lawful, armed defense is assessed in order to determine the extent to which the challenged regulation will be regarded as constitutionally suspect.

Yet, before concluding that Second Amendment jurisprudence is premised on an analysis of the extent to which a challenged law burdens the individual right to armed defense described in *Heller*, it is worth pausing to consider laws that prevent entire classes of individuals from possessing firearms under any circumstances, such as statutory prohibitions on the possession of firearms by convicted felons. dicta seemingly blessing such laws.⁶⁸ The same result has been obtained for statutes barring the possession of firearms by convicted domestic violence misdemeanants or those subject to a domestic violence order of protection.⁶⁹ At most, some courts have left open the possibility that such laws might be invalidated as applied to particular individuals presenting little risk of misusing firearms,⁷⁰ although other courts have concluded that the facial validity of a statutory prohibition on the possession of firearms precludes an as-applied challenge.⁷¹ But, as Eugene Volokh has observed, “[f]elons may need arms for lawful self-defense as much as the rest of us do.”⁷² Thus, if *Heller* prohibits all laws that impose very severe burdens on an individual right of armed self-defense, it is unclear why convicted felons, for example, can be entirely deprived of that right consistent with *Heller*’s account of the Second Amendment’s original meaning.

It is remarkable that an opinion that focused so consciously on the original meaning of the Second Amendment’s operative clause, and which abjured any form of interest balancing, has resulted in litigation that pays so little attention to the original meaning of the operative clause, and which seems to utilize interest balancing with abandon. Indeed, one of the few lower courts to reject the prevailing approach characterized the embrace of means-ends

scrutiny in post-*Heller* jurisprudence as “near-identical to the freestanding ‘interest-balancing inquiry’ that Justice Breyer proposed – and that the majority explicitly rejected – in *Heller*.”⁷³

Some commentators believe that interest balancing is inevitable in Second Amendment jurisprudence despite its seeming rejection in *Heller*.⁷⁴ Moreover, *Heller* can be read narrowly on this point; when discussing interest balancing, the Court referred to Justice Breyer’s advocacy of “none of the traditionally expressed levels (strict-scrutiny, intermediate scrutiny, rational basis), but rather a judge-empowering ‘interest balancing inquiry,’” and responded, “[w]e know of no other enumerated constitutional right whose core protection has been subjected to a freestanding ‘interest balancing’ approach.”⁷⁵ It may be that this passage is best read to reject interest balancing only when not performed as part of one of the previously recognized approaches to means-ends scrutiny.⁷⁶ Still, that lower courts seem to have experienced something of a gravitational pull toward common-law methods of adjudication that lack any grounding in original meaning suggests either that *Heller*’s Second Amendment originalism is something of a dead end, or that lower courts have taken a wrong turn. It is to the latter possibility that we next turn.

II. THE PROBLEMATIC EFFORTS TO RESCUE SECOND AMENDMENT ORIGINALISM

Perhaps lower courts have erred in paying so little attention in *Heller*’s wake to the original meaning of the Second Amendment’s operative clause. Although *Heller* offered scant guidance as to the original meaning of an “infringe[ment]” on the right to keep and bear arms, it did note that original meaning “may of course include

an idiomatic meaning,” and that “the Second Amendment was widely understood to codify a pre-existing right, rather than to fashion a new one.”⁷⁷ An inquiry into framing-era practices and understandings may shed light on the original meaning of both the right to bear arms and the scope of regulatory authority.

A. *Framing-Era Practice*

Framing-era practice may shed considerable light on the original meaning of the Second Amendment. For example, in his extrajudicial writing, while Justice Scalia has acknowledged that although the Constitution contains much that is “abstract and general rather than specific and concrete,” he added, “[t]he context suggests that the abstract and general terms, like the concrete and particular ones, are meant to nail down current rights, rather than aspire after future ones – that they are abstract and general references to *extant* rights and freedoms possessed under the then-current regime.”⁷⁸ This observation seems particularly pertinent in light of *Heller*’s conclusion that the Second Amendment codified a preexisting right.⁷⁹ On this view, framing-era practice fleshes out the original understanding of framing-era right codified in the Second Amendment.⁸⁰ Chief Justice Roberts may have had something like this in mind at oral argument in *Heller* when, in response to the Solicitor General’s suggestion that the Court adopt a test for assessing the constitutionality of firearms regulation like those utilized in other areas of constitutional law, he observed:

Well, these various phrases under the different standards that are proposed, “compelling interest,” “significant interest,” “narrowly tailored,” none of them appear in the Constitution; and I wonder why in this case we have to articulate an all-encompassing standard. Isn’t it enough to determine the scope of the existing right that the amendment refers to, look at the various regulations that were available at the time, including you can’t take the gun to the marketplace and all that, and

determine how these -- how this restriction and the scope of this right looks in relation to those?⁸¹

In terms of framing-era regulation, *Heller* tells us that there is little framing-era precedent for anything other than “gunpowder storage laws” and laws “restricting the firing of guns within the city limits to some degree”⁸² These laws, of course, did not prohibit anyone from possessing or carrying firearms. On this view, the *Heller* dicta on permissible firearms regulation, as well as the lower-court decisions upholding a variety of laws without framing-era support, are simply wrong. Yet, there are a number of reasons to resist this conclusion.

1. *The Perils of reliance on framing-era practice* – There are considerable perils in relying on framing-era practice when evaluating contemporary regulation. Consider, for example, the framing-era firearm. The most advanced type of bearable firearm in the framing era was the flintlock smoothbore musket, which was difficult to load, could produce at most three shots per minute, and was inaccurate except at close range.⁸³ Firearms in common civilian use have since evolved to include weapons capable of a far greater and more accurate range and rate of fire and far more likely to discharge accidentally.⁸⁴ Thus, what was regarded as sufficient regulation in the framing era might accordingly be regarded as insufficient, considering the greater dangers posed by contemporary firearms. As one eminent historian explained:

[B]ecause eighteenth-century arms were not nearly as threatening or lethal as those available today, we . . . cannot expect the discussants of the late 1780s to have cast their comments about keeping and bearing arms in the same terms that we would. Theirs was a rhetoric of public liberty, not public health; of the dangers of standing armies, not casual strangers, embittered family members, violent youth gangs, freeway snipers, and careless weapons keepers. Guns were so difficult to fire in the eighteenth century that the very idea of being accidentally killed by one itself was hard to conceive. Indeed, anyone wanting either to murder his family or protect his home in the eighteenth century would have been better

advised (and much more likely) to grab an axe or knife than to load, prime, and discharge a firearm.⁸⁵

Indeed, constitutional law has already recognized the perils of relying on framing-era practice in light of the increased lethality of firearms. In *Tennessee v. Garner*,⁸⁶ for example, the Court invalidated a statute codifying the framing-era rule that deadly force could be used to stop a fleeing felon as violative of the Fourth Amendment's prohibition on unreasonable search and seizure, concluding: "Because of sweeping change in the legal and technological context, reliance on the common-law rule in this case would be a mistaken literalism that ignores the purposes of a historical inquiry."⁸⁷ The Court explained that

the common-law rule developed at a time when weapons were rudimentary. Deadly force could be inflicted almost solely in a hand-to-hand struggle during which, necessarily, the safety of the arresting officer was at risk. Handguns were not carried by police officers until the latter half of the last century. Only then did it become possible to use deadly force from a distance as a means of apprehension. As a practical matter, the use of deadly force under the standard articulation of the common-law rule has an altogether different meaning – and harsher consequences – now than in past centuries.⁸⁸

Accordingly, "though the common-law pedigree of Tennessee's rule is pure on its face, changes in the legal and technological context mean the rule is distorted almost beyond recognition when literally applied."⁸⁹ Justice Scalia made a similar point when considering the permissibility of a stop-and-frisk in the absence of probable cause to arrest under the Fourth Amendment: he opined that although a frisk in such circumstances was likely regarded as unlawful in the framing era, it may have become constitutionally reasonable once "concealed weapons capable of harming the interrogator quickly and from beyond arm's reach have become common – which might alter the judgment of what is 'reasonable' under the original standard."⁹⁰

SECOND AMENDMENT ORIGINALISM

Scholars frequently acknowledge that original meaning can be distorted when framing-era practice is consulted without reference to historical context.⁹¹ Even most originalists draw a distinction between original meaning and original expected applications, and regard only the former as binding.⁹² Even Justice Scalia has acknowledged that constitutional interpretation should be based on “semantic intention,” and not “the concrete expectations of lawgivers.”⁹³ Thus, there is reason to doubt the utility of framing-era practice as a means of ascertaining the boundaries of contemporary regulatory authority. Even in terms of original meaning, there is reason to doubt that only those regulations that were common in the framing era should be regarded as constitutionally permissible, for even the framers may have regarded semantic meaning, and not framing-era practice, as the proper measure of constitutionality.⁹⁴

2. *The breadth of framing-era regulatory authority* – Framing-era practice embraces authority to undertake prophylactic regulation. For example, consider that *Heller* described the Second Amendment as “codif[ying] a right ‘inherited from our English ancestors,’”⁹⁵ traceable to the English Bill of Rights.⁹⁶

SECOND AMENDMENT ORIGINALISM

The English Bill of Rights, in turn, provided that “the subjects which are Protestants may have Arms for their Defence suitable to their conditions and as are allowed by law.”⁹⁷ Note that this right was highly qualified. The limitation of the right to Protestants, and for the entire populace, protecting only arms “suitable to their condition,” likely reflects the widespread suspicion of Catholics as well as the lower classes.⁹⁸ Moreover, the right was framed to preserve a power to regulate by statute, indicating, as *Heller* explained, that the right “was held only against the Crown, not Parliament.”⁹⁹ By the framing era, English law had evolved to remove the religious qualification, but continued to recognize a legislative power to regulate; as Blackstone put it, English law protected the people’s right “of having arms for their defence, suitable to their condition and degree, and such as are allowed by law Which . . . is indeed a public allowance, under due restriction”¹⁰⁰ Thus, the preexisting English iteration of the right to keep and bear arms twinned both right and regulatory authority.

To be sure, as Don Kates has argued, the Second Amendment is a constitutional limitation, and accordingly reliance on the regulatory power preserved in the English Bill of Rights might be thought to “miss[] the distinction between the American system of constitutional rights and the non-constitutional English system in which even the most sacrosanct rights guaranteed by one Parliament may be abrogated by its successors.”¹⁰¹ Nevertheless, to the extent that the Second Amendment is thought to have codified a preexisting right derived from English law, the limited character of that right surely is of some importance in ascertaining the original meaning of the right to keep and bear arms. Indeed, American experience with firearms regulation reflects recognition of evolving regulatory power consistent with the character of the preexisting English right.

Although, as *Heller* noted, framing-era regulation was limited, it was not insignificant. Classes of individuals such as slaves,

freed blacks, and people of mixed race were frequently prohibited from owning or carrying guns, and some states extended this bar to Catholics or whites unwilling to swear allegiance to the Revolution, and laws requiring the safe storage of firearms or gunpowder or barring loaded firearms indoors were common as well.¹⁰² Indeed, it was widely believed that only loyalists possessed a right to bear arms, with others facing sanctions including disarmament.¹⁰³ Militia laws also frequently required individuals to appear at periodic musters with their firearms and have them registered and inspected.¹⁰⁴

Subsequently, in the 1820s and 30s, laws prohibiting the carrying of concealed firearms emerged following a surge in violent crime.¹⁰⁵ Although laws prohibiting open-carry were more often than not invalidated, concealed-carry bans were generally upheld against constitutional challenge under the Second Amendment or state-law analogues,¹⁰⁶ as *Heller* acknowledged.¹⁰⁷

to state and local laws¹⁰⁸—enacted legislation abolishing the militia in most southern states and prohibiting any effort to arm militias in those states.¹⁰⁹ The measure’s sponsors dismissed Second Amendment objections, arguing that the prohibition was justified by the prevalence of armed groups in the south in the wake of the Civil War “dangerous to the public peace and to the security of Union citizens in those states.”¹¹⁰ This legislation was one in a series of gun-control measures undertaken at the time in an effort to suppress what was seen as unacceptable levels of violence, principally in the south.¹¹¹ Also in the nineteenth century, in response to rampant violence in frontier towns, some limited or even banned the carrying of firearms, an approach taken in many cities as well.¹¹²

Regulation continued apace in the twentieth century. Early in the century, a number of state and local governments enacted new restrictions on the sale and carrying of firearms.¹¹³ For example, prohibitions on the possession of firearms by convicted felons emerged early in the twentieth century in response to a crime wave following the First World War.¹¹⁴ At the federal level, the National Firearms Act of 1934 required manufacturers to obtain a federal license and register machineguns, short-barrel rifles, silencers, and other weapons regarded as dangerous.¹¹⁵ The Firearms Act of 1938 required a license to ship firearms in interstate commerce and prohibited transfers to specified classes of individuals including certain convicted felons, fugitives from justice, and persons under indictment.¹¹⁶ The Gun Control Act of 1968 later prohibited the interstate shipment of firearms except to a licensed dealer or collector, required all dealers to obtain federal licenses, and prohibited the sale of firearms to and their possession by additional

classes of disqualified individuals, including convicted felons, those suffering from serious mental illness, substance abusers and minors, and placed limitations on the importation of firearms.¹¹⁷ In 1993, Congress required a background check to purchase handguns and the following year it banned the possession of specified assault weapons for the ensuing decade.¹¹⁸

In *Heller*, in order to ascertain the original meaning of the Second Amendment, the Court examined commentary and practice from “after its ratification through the end of the nineteenth century.”¹¹⁹ It did so to undertake “the examination of a variety of legal and other sources to determine the *public understanding* of a legal text in the period after its enactment or ratification,” adding that “[t]hat sort of inquiry is a critical tool of constitutional interpretation.”¹²⁰ There is indeed a convincing case for utilizing post-enactment practice as evidence of original meaning.¹²¹ Yet, this methodology suggests that the Second Amendment did not fix regulatory authority in terms of only those regulations prevalent at the Second Amendment’s ratification, but instead was capable of changing to meet felt exigencies. The recognition that regulatory infrastructure does not seem to have been fixed at the framing does not offer a very precise methodology for ascertaining the scope of regulatory power, but it does suggest that even in terms of original meaning, framing-era regulatory practice is of limited interpretive significance.

B. Historical Analogy

Before abandoning framing-era practice as a means to flesh out the original meaning of the Second Amendment, it is worth considering whether framing-era practice, even if not dispositive, can nevertheless provide useful insights to guide constitutional interpretation. Perhaps the leading scholarly advocate of this approach to originalism is Lawrence Lessig, who contends that the presuppositions underlying framing-era practices and understandings should be identified and then “translated” in light of contemporary understandings and circumstances.¹²² Darrell

SECOND AMENDMENT ORIGINALISM

Miller has made a similar suggestion for the Second Amendment, arguing that Second Amendment jurisprudence could be modeled on that of the Seventh Amendment, which evaluates contemporary civil-jury practice through analogical reasoning based on framing-era practice.¹²³

1. *Historical analogy's questionable originalist pedigree* – At the outset, it is questionable whether Professor Miller's approach is premised on the original meaning of the Second Amendment. The Seventh Amendment provides that “[i]n Suits at common law . . . the right to trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise re-examined in any Court of the United States, than according to the rules of the common law.”¹²⁴ This formulation expressly embraces extant common-law jury practice, and thus it should come as no surprise that the Supreme Court has looked to framing-era jury practice when interpreting the Seventh Amendment.¹²⁵ The Second Amendment, however, employs a different textual formulation; it forbids “infringe[ment]” of the right to keep and bear arms rather than “preserv[ing]” that right.

Professor Miller nevertheless argues that whenever there is a failure to “preserve” the right to keep and bear arms there is necessarily an infringement, suggesting parallelism between the

[I]n such cases, the proper interpretive approach is to reason by analogy from history and tradition.”). For a proposal along similar lines, advocating the use of analogical reasoning based on “historical guideposts,” see Patrick J. Westview Instruments, Inc.*, 517 U.S. 370, 376 (1996); *Ross v. Bernhard*, 396 U.S. 531, 533-34 (1970). This is not, however, the only plausible understanding of the original meaning of the Seventh Amendment. See, e.g., AKHIL REED AMAR, *THE BILL OF RIGHTS: CREATION AND RECONSTRUCTION* 89-93 (1998) (Seventh Amendment guarantees a jury in federal court only when a jury is available in state court); Stanton D. Krauss, *The Original Understanding of the Seventh Amendment Right to Jury Trial*, 33 U. RICH. L. Second and Seventh Amendments.¹²⁶ This reading of the Second Amendment, however, treats different textual formulations as if they were identical. It also fails to explain how the Amendment could tolerate any limitations on the right to “keep or bear,” that is, possess or carry firearms, if the text is properly understood to prohibit any infringement on an individual right to possess and carry anything that qualifies as bearable “Arms.” Professor Miller acknowledges the problem, writing that the Second Amendment could not possibly “mean what it says,” but must tolerate limitations on the right to keep and bear arms by virtue of an “idiomatic meaning.”¹²⁷ If the term “infringe[d]” in the Second Amendment had this type of an idiomatic meaning in the framing era, however, Professor Miller does not identify any historical evidence that it was understood as a synonym for the term “preserve” in the Seventh Amendment.

2. *The difficulties of historical analogy* – Even if the Second Amendment’s meaning is properly discoverable through analogy to framing-era practice, the process of applying framing-era practice and understandings to contemporary circumstances presents considerable difficulty, as the critics of Professor Lessig’s methodology have contended.¹²⁸ In the context of the civil jury right, reasoning by historical analogy has often proven difficult; it requires a challenging counterfactual inquiry into whether a civil action unknown in the framing era would have been tried to a jury at the framing, as Professor Miller admits.¹²⁹ Indeed, the Court has acknowledged that drawing analogies to framing-era practice does not always supply an adequate basis for assessing whether an action unknown in the framing era must be tried to a jury, and it has for that reason concluded the Seventh Amendment inquiry turns primarily on whether the remedy sought in a new form of action resembles a damages remedy at common law.¹³⁰ A focus on remedy alone surely simplifies matters, but no comparable metric presents itself for assessing firearms regulation, which involves no

single remedy for a legal wrong, but rather a complex balance between liberty and the need for prophylactic regulation of weapons posing far greater dangers than were known in the framing era.

As Joseph Blocher has observed, analogical reasoning involves marked difficulty when it comes to the Second Amendment, since there is no agreement on a methodology for determining which similarities between contemporary and framing-era regulations should be regarded as relevant.¹³¹ Beyond that, when the relevant historical context has sufficiently changed, it is doubtful that efforts to analogize to framing-era practice have utility.¹³² For example, when that a contemporary regulation has no fair framing-era analog, that may not be indication of its invalidity, but rather merely a reflection of changed circumstances. Although there may have been relatively little gun control in the framing era, firearms were also far less lethal; accordingly, framing-era judgments about the need for regulation were made in a context far different from contemporary circumstances. The absence of an analogous framing-era regulation to a challenged contemporary law may therefore indicate no more than that no fairly analogous regulatory issue arose in the framing era.

Even when analogous framing-era regulations can be identified, many difficulties remain. The prophylactic regulations of the framing era utilized proxies for dangerousness that we would today find wildly inaccurate, if not profoundly offensive, such as religion, race, and political loyalty. Yet, if contemporary regulation based on similarly unreliable proxies were permitted, virtually any regulation might be sustained. For example, such rough proxies for special dangerousness would seemingly provide sufficient support for the District of Columbia's handgun ban, since, as Justice Breyer observed in *Heller*, there was plenty of evidence that handguns were strongly linked to crime, injuries, and death.¹³³

Justice Scalia has himself rejected analogical reasoning as an originalist methodology. In *United States v. Jones*,¹³⁴ he authored

the opinion of the Court that invoked framing-era conceptions of trespass to support its holding that the attachment and monitoring of a global positioning device to an automobile in order to determine its location was a “search” within the meaning of the Fourth Amendment.¹³⁵ In his separate opinion, however, Justice Alito observed that “it is almost impossible to think of late 18th-century situations that are analogous to what took place in this case,” such as “a case in which a constable secreted himself in a coach for a period of time in order to monitor the movements of the owner,” and, he added, even then “this would have required either a gigantic coach, a very tiny constable, or both”¹³⁶ Justice Scalia responded: “[I]t is quite irrelevant whether there was an 18th-century analog,” adding, “our task, *at a minimum*, is to decide whether the action in question would have constituted a ‘search’ within the original meaning of the Fourth Amendment.”¹³⁷ This view plainly rejects the necessity to identify a framing-era analog in order to apply the original meaning of a constitutional provision.

Some concrete examples illustrate the manifold problems with the use of historical analogy. Consider, for example, laws prohibiting the possession of high-capacity magazines thought by some to facilitate mass shootings by enabling offenders to fire many rounds at a high rate.¹³⁸ Framing-era firearms were capable of nothing approximating this rate of fire. Thus, it is doubtful that the framing-era faced any fairly analogous regulatory issue.

Or, consider the surprisingly knotty problem of analogical reasoning presented by laws prohibiting the possession of firearms by convicted felons. Some commentators have argued that because laws prohibiting the possession of firearms by convicted felons appeared only in the twentieth century, they have questionable originalist support.¹³⁹ Don Kates responded with an analogy: most felonies in the framing era were punished by death and forfeiture of property, and therefore a framing-era felony conviction effectively extinguished the right to keep and bear arms like contemporary laws barring felons from possessing firearms.¹⁴⁰

SECOND AMENDMENT ORIGINALISM

But Kevin Marshall observed that the imposition of capital punishment and forfeiture upon a felony conviction was far from universal in the framing era.¹⁴¹ Thus, it seems that a felony conviction was not universally associated with a loss of firearms rights. Even so, Kates and others have responded, framing-era rhetoric often associated the right to bear arms with the full membership in the polity afforded to law-abiding citizens, which could presumably be forfeited as a consequence of criminal misconduct.¹⁴² But, Marshall and others have replied, although there were some framing-era proposals that would have carved out from the right to bear arms those who had committed crimes or were otherwise dangerous or untrustworthy, the text of the Second Amendment was not framed in those terms.¹⁴³ Beyond that, it seems indisputable that a felony conviction has far different significance today than in the framing era. As the Court has explained, “[a]lmost all crimes formerly punishable by death no longer are or can be And while in earlier times the gulf between the felonies and the minor offences was broad and deep, today the distinction is minor and often arbitrary. Many crimes classified as misdemeanors, or nonexistent, at common law are now felonies.”¹⁴⁴ Thus, it is doubtful that a framing-era felony conviction is properly analogized to a contemporary felony conviction.

Therefore, it is small wonder that courts considering the historical evidence on felon disqualification often find it inconclusive.¹⁴⁵ Perhaps only those convicted of felonies regarded as dangerous should be barred from possessing firearms, as some

commentators have argued.¹⁴⁶ This approach, however, would enmesh courts in the difficult predictive business of judging which felonies present unacceptable risk of future firearms-related misconduct, a type of judgment alien to the framing-era regime.¹⁴⁷ Indeed, many framing-era felonies did not require proof of violence.¹⁴⁸ This proposal might also warrant treating certain violent misdemeanors or other potential indicia of dangerousness as the basis for depriving individuals of their right to keep and bear arms. Whether this new constitutional inquiry has any fair analogy in framing-era practice, however, is highly uncertain.

Finally, consider laws that restrict carrying firearms in public places, whether concealed or openly. Laws prohibiting carrying concealed weapons became common in the nineteenth century.¹⁴⁹ Significantly, as *Heller* acknowledged, most nineteenth-century courts upheld bans on carrying firearms in public places against challenges under the Second Amendment or its state constitutional analogues.¹⁵⁰ Some commentators locate originalist support for laws limiting the right to carry firearms in the Statute of Northampton,¹⁵¹ which they believe was understood as a broad prohibition on carrying firearms because of their potential to alarm others.¹⁵² Blackstone's description of the statute seems to characterize it in these terms: “[R]iding or going armed with dangerous or unusual weapons, is a crime against the public peace, by terrifying the people of the land.”¹⁵³ Hawkins provided a potentially narrower description, however, requiring that the firearm be carried in circumstances likely to provoke alarm: “[N]o wearing of arms is within the meaning of this statute, unless it be accompanied by such circumstances as are apt to terrify the

people.”¹⁵⁴ Coke, in contrast, described the statute in broad terms, providing that all but royal officials, those assisting them, and those responding to “a Cry made for armies to keep to peace,” are forbidden “to goe [sic] nor ride armed by night nor by day”¹⁵⁵

If the Second Amendment codified a preexisting right of English origin, perhaps it incorporated the limitation on that right represented by the Statute of Northampton, although the English sources describe the statute somewhat inconsistently. There is also, however, a line of nineteenth-century American precedent that seemingly recognized a right to carry firearms in public, at least openly,¹⁵⁶ and some commentators believe that the prevailing understanding was that the carrying of weapons could be prohibited only when it was done in a manner that could alarm others, as when they were concealed.¹⁵⁷

Thus, perhaps there is a case that laws prohibiting the carrying of concealed firearms are fairly analogous to the Statute of Northampton because of the potential for concealed-carry to alarm others. This, however, is dubious. A concealed weapon, precisely because it is hidden from view, cannot alarm others unaware of its presence. Instead, as Professor Volokh has noted, those jurisdictions that drew a distinction between concealed and open-carry seem to have proceeded on the view that law-abiding persons carried weapons openly, while concealed carry was thought suspicious or threatening.¹⁵⁸ There is ample expression in nineteenth-century decisions to this effect.¹⁵⁹ On this view,

State*, 1

however, concealed-carry is used as a proxy for dangerousness, a rather different type of regulation than reflected in the Statute of Northampton. Beyond that, Professor Volokh rightly questions whether the view that the Statute of Northampton can fairly justify prohibitions on carrying concealed firearms under contemporary circumstances, in which many might find open carry far more alarming than a discreetly concealed firearm.¹⁶⁰ Thus, whether framing-era practice provides fair analogical support for analyzing the contemporary scope of the right to carry weapons in public, whether openly or concealed, is unsettled. It seems likely that the nineteenth-century approach of forbidding concealed but not open carry is best understood as utilizing concealment as a proxy for identifying individuals likely to be carrying weapons for an improper purpose. We can fairly doubt, however, whether this proxy is fairly rooted in the Statute of Northampton, and whether it has fair application in contemporary conditions.

Of course, one could reject the historical basis for distinguishing between concealed and open-carry, as a divided panel of the Ninth Circuit did by holding that the Second Amendment permits a prohibition on either concealed or open-carry, but not both, and for that reason invalidating a restrictive permitting policy for carrying concealed firearms in light of a concurrent statutory ban on open carry.¹⁶¹ Again, however, it is debatable whether this approach represents a fair analogy to framing-era practice, which recognized regulatory power to restrict the carrying of firearms under what were regarded as suspicious or alarming circumstances. Thus, although the panel purported to

ground its invalidation in a limitation on the ability to carry concealed firearms in the original understanding of the Second Amendment,¹⁶² it is hard to miss the ahistorical character of this holding; as the dissenting judge noted, there is ample historical evidence indicating that prohibitions on concealed carry have long been regarded as consistent with the Second Amendment, yet the majority invalidated a law restricting concealed and not open-carry.¹⁶³ A Second Amendment jurisprudence that is indifferent to whether concealed or open-carry represents a threat to the public safety—instead leaving the legislature entirely free to decide which to ban—seems to offer little in the way of fair analogy to the framing-era understanding, which permitted regulation under circumstances regarded as suspicious or alarming. The Ninth Circuit’s decision, rather than reflecting an authentic Second Amendment originalism, more likely demonstrates the limitations of that approach.¹⁶⁴

Professor Miller has acknowledged that adjudication by historical analogy is, at best, “a partial solution,”¹⁶⁵ and admits that it supplies no clear answer even for the two regulatory issues he discusses in his own article: whether the Second Amendment permits prohibitions on carrying firearms in public and large-capacity magazines.¹⁶⁶ A methodology this imprecise hardly seems a satisfactory basis for constitutional adjudication. Indeed, plausible analogical arguments frequently can be deployed to attack or defend challenged regulations; yet no methodology presents itself, originalist or otherwise, for selecting the appropriate analogy. Like all counterfactual historical inquiries, an effort to determine how the framers would have assessed regulatory issues alien to their world is fraught with peril. Second

¹⁶⁴ Conversely, one could take the view that Second Amendment jurisprudence should continue to ape the distinction drawn in the nineteenth century between concealed and open carry regardless of its likely inapplicability to contemporary circumstances, as did one student commentator. *See* Meltzer, *supra* note 106, at 1520. But, as we have seen, the Second Amendment has never been understood to freeze regulatory authority in place, and, beyond that, an originalism that pays no attention to the historical context in which legal rules developed is deeply problematic – if the rationale on which the nineteenth-century law distinguished between concealed and open carry has no continuing vitality, perhaps even those who crafted the distinction would regard it as inapplicable to the contemporary context. Given that the Second Amendment does not codify framing-era practice and has long been understood to permit regulatory evolution, there is little justification for wooden adherence to past practice, as we have seen in Part II.A above.

SECOND AMENDMENT ORIGINALISM

Amendment originalism will need something more than analogical reasoning to produce a workable jurisprudence.

C. Longstanding Regulations

Another effort to develop an authentically originalist approach in contrast to that taken by lower courts in *Heller*'s wake would insist that a regulation have a substantial historical pedigree, even if lacking in framing era support.¹⁶⁷ This approach finds support in *Heller*'s dicta declining "to cast doubt on longstanding prohibitions"¹⁶⁸ Along these lines, Professor Blocher has argued that the Second Amendment should be understood to permit some local variability in the scope of firearms regulation in light of the longstanding record of relatively more intensive firearms regulation in cities when compared to rural areas.¹⁶⁹

It is difficult, however, to reconcile this approach with *Heller*'s originalism. Nothing in the original meaning of the Second Amendment's operative clause, as explicated in *Heller*, explains why longstanding regulations, especially when they lack a framing-era pedigree, deserve deference. Indeed, *Heller* tells us that the original meaning of the Second Amendment's operative clause conferred an individual right to possess or carry any firearms in common civilian use, with no exception for "longstanding" infringements on this right. To be sure, that a particular regulation managed to avoid invalidation for some substantial time might be some evidence that it is consistent with original meaning. There are also sound arguments for deference to longstanding practice, understandings, and traditions.¹⁷⁰ Nevertheless, treating regulations that lack a substantial historical pedigree as invalid for that reason alone is deeply problematic. Not only does this view have no footing in *Heller*'s account of the original meaning the operative clause, it regards all novel regulations as invalid unless and until they somehow survive some type of incubation period. Yet, every regulation now regarded as longstanding went through such an incubation period. As Judge Easterbrook put it when discussing the constitutionality of section 922(g)(9) of Title 18 of the United States Code, which prohibits the possession of firearms by anyone "who has been convicted in any court of a misdemeanor crime of domestic violence"¹⁷¹:

¹⁶⁷ See, e.g., *Drake v. Filko*, 724 F.3d 426, 431-34 (3d Cir. 2013); *United States v. White*, 593 F.3d 1199, 1205-06 (11th Cir. 2010).

¹⁷¹ 18 U.S.C. §922(g)(9) (2006).

SECOND AMENDMENT ORIGINALISM

The first federal statute disqualifying felons from possessing firearms was not enacted until 1938; it also disqualified misdemeanants who had been convicted of violent offenses. A 1938 law may be “longstanding” from the perspective of 2008, when *Heller* was decided, but 1938 is 147 years after the states ratified the Second Amendment. The Federal Firearms Act covered only a few violent offenses; the ban on possession by *all* felons was not enacted until 1961. In 1968 Congress changed the “receipt” element of the 1938 law to “possession,” giving 18 U.S.C. § 922(g)(1) its current form. If such a recent extension of the disqualification to non-violent felons (embezzlers and tax evaders, for example) is presumptively constitutional, as *Heller* said in note 26, it is difficult to condemn § 922(g)(9), which like the 1938 Act is limited to violent crimes. It would be weird to say that § 922(g)(9) is unconstitutional in 2010 but will become constitutional by 2043, when it will be as “longstanding” as § 922(g)(1) was when the Court decided *Heller*.¹⁷²

Indeed, the Second Amendment seems to have long been understood to permit novel regulations, despite the fact that those regulations were not “longstanding” for some period of time after they first appeared. A methodology that regards regulations as unconstitutional only during the period before they become “longstanding” is rooted in neither originalism nor any coherent program of constitutional interpretation.

D. Doctrinal Borrowing

A final possibility for developing an originalist Second Amendment jurisprudence would be to borrow doctrine from parallel constitutional text. If the Second Amendment bears textual similarities to other constitutional provisions, one plausible approach would be to interpret the Second Amendment in a similar fashion to those parallel provisions.¹⁷³ For example, Part II.B considered the proposal to utilize the analogical approach of Seventh Amendment jurisprudence to assess the propriety of contemporary firearms legislation. Yet as that example demonstrates, there are formidable textual and practical obstacles to utilizing analogical reasoning in the Second Amendment context.

Another approach to doctrinal borrowing invokes the jurisprudence developed under the First Amendment’s prohibition

on laws “abridging the freedom of speech, or of the press.”¹⁷⁴ *Heller* invoked the First Amendment at several points in the opinion as an example of an analogous individual right.¹⁷⁵ Since the First Amendment confers an individual right in a seemingly unambiguous fashion, but has been interpreted to permit some forms of regulation under various formulations, perhaps Second Amendment jurisprudence should be constructed in a parallel fashion.¹⁷⁶ Some commentators have argued that First Amendment doctrine should be used as a model for Second Amendment jurisprudence.¹⁷⁷ Some courts have embraced that view.¹⁷⁸ Others have been more skeptical.¹⁷⁹

SECOND AMENDMENT ORIGINALISM

At the outset, there is little reason to believe that a Second Amendment jurisprudence constructed to mirror free-speech doctrine would qualify as originalist. The original meaning of the First Amendment is itself unclear; there is something verging on consensus among scholars that no coherent account emerges from the historical evidence, and certainly no account that explains contemporary doctrine.¹⁸⁰ Indeed, no one contends that contemporary doctrine is premised on the original meaning of the First Amendment; to the contrary, as Chief Justice Roberts put it at the *Heller* argument, “these standards that apply in the First Amendment just kind of developed over the years as sort of baggage that the First Amendment picked up.”¹⁸¹ Nor is there historical evidence that the First and Second Amendments were understood to have parallel original meanings.¹⁸² Thus, in terms of original meaning, there is slight support that borrowing First

SECOND AMENDMENT ORIGINALISM

Amendment jurisprudence would supply a basis for an authentically originalist Second Amendment jurisprudence.

In any event, the similarities between the First and Second Amendment are more apparent than real. The First Amendment does not identify a purpose for which speech and the press receive protection; it instead seems to offer protection for written and oral expression without any particular instrumental objective in mind. Indeed, the Court has resolutely rejected linking First Amendment protection to any discrete instrumental objective; instead, the Court states that anything conveying some sort of idea is eligible for First Amendment protection,¹⁸³ and that the First Amendment protects not only “discussion of governmental affairs,” but also “expression about philosophical, social, artistic, economic, literary, or ethical matters”¹⁸⁴ Even “a narrow, succinctly articulable message is not a precondition for constitutional protection,” since the First Amendment embraces “the unquestionably protected painting of Jackson Pollock, music of Arnold Schoenberg, or Jabberwocky verse of Lewis Carroll.”¹⁸⁵ As a consequence, any governmental interest in suppressing expression is considered impermissible: “If there is a bedrock principle underlying the First Amendment, it is that the government may not prohibit the expression of an idea simply because society finds the idea itself offensive or disagreeable.”¹⁸⁶

Second Amendment rights have a far different character. Gregory Magarian has argued that it is difficult to analogize between expression and the right to keep and bear arms, since speech serves a far broader set of purposes and has a far more tenuous relation to concrete harms inflicted on others than the right to keep and bear arms.¹⁸⁷ He and Mark Tushnet have also observed that First Amendment jurisprudence cannot easily be applied to firearms regulation because firearms regulation can never be firearms-neutral in the way that speech regulation can be

content-neutral; any regulation triggered by the content of speech or expression is considered suspect under the First Amendment, while gun-control laws—even those characterized as presumptively lawful in *Heller*—necessarily focus on the manner in which firearms are possessed or carried.¹⁸⁸ Yet, even these criticisms understate the problems with constructing Second Amendment jurisprudence by borrowing First Amendment doctrine.

Heller concluded that the individual right to keep and bear arms was codified to protect the interest in lawful armed defense and that regulations that impermissibly impinge on that interest are invalid. Indeed, *Heller* cautioned that the Second Amendment right “[i]s not the right to keep and carry any weapon whatsoever in any manner whatsoever and for any purpose,” and invalidated the challenged ordinance because it “makes it impossible for citizens to use [firearms] for the core lawful purpose of self-defense”¹⁸⁹ Consequently, as we have seen, lower courts have applied *Heller* in a fashion that assesses the extent to which a challenged regulation burdens the core interest in lawful defense. Accordingly, it would be anomalous to borrow a free-speech and free-press jurisprudence developed with no discrete instrumental objective in mind and apply it to a Second Amendment right formulated with reference to precisely such an objective. First Amendment protection, in other words, is not consequentialist, but Second Amendment protection, *Heller* tells us, is, and deeply so.

Two examples illustrate the point. First, consider again laws that prohibit the possession of firearms by convicted felons. *Heller* treats these regulations as presumptively lawful, and there are serious arguments for sustaining such laws, which have been consistently upheld by appellate courts since *Heller*.¹⁹⁰ In the First Amendment context, however, the Court long ago held that the right to speak or publish cannot be denied as a result of past misconduct, such as the publication of false and defamatory material, under the framing-era rule against prior restraints on publication.¹⁹¹ It has also held that convicted felons retain First Amendment rights, even when writing about the crime for which they were convicted.¹⁹² If the Second Amendment is properly understood to permit prohibitions on possessing firearms by

convicted felons, First Amendment jurisprudence provides little foundation for Second Amendment doctrine.

Second, consider laws that provide for enhanced penalties when a firearm is used or carried during the commission of a substantive crime. Since *Heller*, these laws have been routinely upheld against Second Amendment attack.¹⁹³ In light of *Heller*'s admonition that the Second Amendment is directed at protection of an interest in lawful armed defense, this result seems correct. Conversely, First Amendment doctrine insists that all speech receive equal treatment regardless of its communicative effects.¹⁹⁴ Thus, while all expression within the scope of the First Amendment's protection is normally afforded protection, *Heller* appears to condition constitutional protection on the purpose for which individuals keep and bear arms.¹⁹⁵

In short, any effort to construct a Second Amendment jurisprudence using First Amendment principles is deeply problematic. The character of these constitutional protections seems far too disparate to give rise to fruitful doctrinal borrowing.

III. THE CONSTITUTIONAL CASE FOR FIREARMS REGULATION

Thus far, the search for an authentic Second Amendment originalism has borne little fruit. If the original meaning of the Second Amendment's operative clause is taken literally, there appears to be little basis for limiting anyone's ability to possess or carry firearms in common civilian use. Yet, this is inconsistent with the approach taken in *Heller*, its application in lower courts, and the history of firearms regulation. Accordingly, it is difficult to reconcile an understanding of the Second Amendment's original meaning with *Heller*'s dicta on permissible regulation, its focus on a core interest in lawful armed defense, and the history of firearms regulation. Perhaps for these reasons, some commentators have argued that the scope of permissible firearms regulation has its

SECOND AMENDMENT ORIGINALISM

basis in popular sentiment rather than the Constitution's text.¹⁹⁶ But there is something deeply anomalous about reading the individual rights protected by the Constitution to ensure that the scope of regulatory authority mirrors public sentiment. After all, there is little reason to believe that a Bill of Rights is necessary to ensure that elected officials hew to the public's sensibilities about gun control or any other issue. As Justice Scalia has put it: "If the Constitution were . . . a novel invitation to apply current societal values, what reason would there be to believe that the was addressed to the courts rather than to the legislature?"¹⁹⁷ Surely the more persuasive account is that the purpose and effect of codifying an individual right as constitutional law is to protect it against the vagaries of popular opinion.¹⁹⁸ If Second Amendment jurisprudence is properly understood to sustain gun-control laws when they reflect majoritarian sensibilities rather than hewing to the constitutional text, perhaps the courts have made a wrong turn.

There is, however, one more source of regulatory authority to consider, one that has been hiding in plain sight.

A. *Regulatory Power and the Preamble*

It is time to return to the Second Amendment's preamble. After all, by referring to the existence of "[a] well regulated Militia,"¹⁹⁹ the Second Amendment's preamble, rather than abolishing the regulatory power over the militia conferred by Article I,²⁰⁰ expressly contemplates continued regulatory authority, whether by Congress or the States.²⁰¹ Moreover, *Heller* concluded that the original meaning of the term "Militia" refers not to "the

¹⁹⁷ Scalia, *supra* note 17, at 854. This is not a concern only of originalists such as Justice Scalia; the quintessentially nonoriginalist John Ely made essentially the same point. See JOHN HART ELY, *DEMOCRACY AND DISTRUST: A THEORY OF JUDICIAL REVIEW* 64-69 (1980).

¹⁹⁸ Cf. *W. Va. St. Bd. of Educ. v. Barnette*, 319 U.S. 624, 638 (1943) ("The very purpose of a Bill of Rights was to withdraw certain subjects from the vicissitudes of political controversy, to place them beyond the reach of majorities and officials and to establish them as legal principles to be applied by the courts.").

organized militia,” but rather “all able bodied men.”²⁰² Thus, the Court added, the “militia” was originally understood as comprised of “the body of all citizens capable of military service, who would be expected to bring the sorts of lawful weapons that they possessed at home to militia duty.”²⁰³ Thus, the class that is to be “well regulated” consists of all who are able-bodied and capable of military service, regardless of whether they are actually enrolled in an organized militia. In short, *Heller* treats the militia and those entitled to exercise the right to keep and bear arms as, for all practical purposes, synonyms. Moreover, because the framing-era understanding was that the right would be exercised by those subject to regulatory authority, it would do serious violence to the original understanding to disaggregate the right from the existence of regulatory authority; the framing-era understanding was that the right would be exercised only by those subject to regulation.²⁰⁴

As for the phrase “well regulated,” the first edition of Webster’s dictionary defined “regulated” as “[a]djusted by rule, method or forms; put in good order; subjected to rules or

²⁰² 554 U.S. at 596. The Court added that the first militia act, enacted the year after that the Second Amendment’s ratification, defined the militia as “each and every able-bodied white male citizen between the ages of 18 and 45” *Id.* (quoting Act of May 8, 1792, ch. 33, 1 Stat. 271).

²⁰³ *Id.* at 627. This capacious definition of “Militia” is consistent with that of most scholars who have advanced the view that the Second Amendment protects an individual right. *See, e.g.,* Kates, *supra* note 96, at 214-18; McAfee & Quinlan, *supra* note 96, at 807-22; Eugene Volokh, *The Commonplace Second Amendment*, 73 N.Y.U. L. REV. 793, 810-12 (1998). *But see* Nelson Lund, *D.C.’s Handgun Ban and the Constitutional Right to Bear Arms: One Hard Question?*, 18 GEO. MASON CIV. R.L.J. 229, 240-41 (2008) (arguing that the “Militia” in the preamble and “the people” in the operative clause differ).

²⁰⁴ One scholar has wondered whether a militia-based regulatory power might not reach “those too old or too feeble to serve in the militia” Michael C. Dorf, *Commerce, Death Panels, and Broccoli: Or Why the Activity/Inactivity Distinction in the Health Care Case Was Really About the Right to Bodily Integrity*, 29 GA. ST. L. REV. 897, 906 (2013). This possible limitation on regulatory power seems to have little practical significance – debates over the gun control rarely center on its application to the aged or infirm. In any event, the history of firearms regulation, as we have seen, has never limited regulatory authority to those regarded as capable of militia service. To the contrary, those regarded as unable to serve in the militia, such as loyalists or free blacks in the framing era, and convicted felons thereafter, were still regarded as subject to regulatory authority. If history is any guide, regulatory power seems to have been regarded as comprehensive if only to ensure that the privileges associated with militia service were limited to those subject to regulation as part of the militia. In any event, given the relation between the preamble and the operative clauses of the Second Amendment, it seems plain that the preamble expresses the circumstances under which the right could be exercised – that is, those exercising the right should comprise a “well regulated militia.” The framing-era understanding, in short, is that the right could not be considered except when subject to regulatory authority.

SECOND AMENDMENT ORIGINALISM

restrictions.”²⁰⁵ *Heller* stated that the original meaning of the phrase was “the imposition of proper training and discipline.”²⁰⁶ These terms, of course, are expansive, contemplating not merely training, but also rules and “discipline,” which could conceivably embrace everything from a forfeiture of the right to keep and bear arms as a consequence of misconduct, to a variety of prophylactic measures that endeavor to reduce the likelihood of misconduct.²⁰⁷ Thus, the preamble indicates that the Second Amendment preserves substantial regulatory authority.

This understanding of the regulatory authority preserved by the preamble explains a great deal. The original meaning of the Second Amendment’s operative clause, as explicated in *Heller*, offers no apparent basis for any limitation on the right of an individual to possess or carry firearms in common civilian use, nor does it appear to concern itself with a core interest in lawful armed defense. Yet, *Heller* acknowledges that the preamble can be used to shed light on the operative clause; it explains that “[l]ogic demands that there be a link between the stated purpose and the command,” and that this “requirement of logical connection may cause a prefatory clause to resolve an ambiguity in an operative clause,” thereby serving the preamble’s “clarifying function.”²⁰⁸ Although the Court found no ambiguity in the original meaning of the phrase “the right of the people to keep and bear arms,”²⁰⁹ but it made no such claim regarding the term “infringed” in the operative clause. Indeed, both the Court’s dicta on permissible firearms regulation and its precise holding suggest a good deal of ambiguity

in that term. Understanding the preamble as supplying a textual acknowledgement that not all regulation amounts to an “infringement” on the right to keep and bear arms, in turn, solves a good number of textual problems lurking in *Heller*’s treatment of firearms regulation. The Second Amendment, read in light of its preamble, reflects a textual commitment to regulation found nowhere else in the Bill of Rights.²¹⁰

It is therefore unsurprising that history yields ample evidence of expansive regulatory authority over firearms. Indeed, the right to keep and bear arms has long been understood to permit prophylactic regulation, including prohibitions on the possession of firearms by classes of individuals seen as posing unacceptable risks to public safety, such as Catholics at the time of the English Bill of Rights, or free Blacks and loyalists in the framing era. The Second Amendment also seems to have been understood to permit prophylactic regulation where firearms were carried under circumstances regarded as suspicious, such as prohibitions on carrying concealed weapons. If the right coexists with broad regulatory power, then these limitations on the right to keep and bear arms become textually comprehensible. Moreover, since the preamble preserves regulatory authority in a generic manner, rather than endeavoring to preserve framing-era practice as in the Seventh Amendment, it become possible to explain why the right to keep and bear arms tolerates regulations unknown in the framing era.

To be sure, the preamble does not contemplate limitless regulation. For one thing, a boundless regulatory power could convert the right into a nullity, which is not a plausible reconciliation of the operative clause and the preamble. For another, as Nelson Lund has observed, “something can only be ‘well regulated’ when it is not overly regulated or inappropriately regulated.”²¹¹ Yet, beyond its recognition of both a right and a regulatory power that evidently must be tailored in some appropriate way, the text offers nothing like a doctrinal formula for reconciling right and regulatory authority.

²¹⁰ One commenatator, for example, has observed that in other areas of constitutional law, there is usually not a tolerance for broad, categorical prophylactic regulation similar to the type of regulation that is seemingly permitted under the Second Amendment. See Josh Blackman, *The Constitutionality of Social Cost*, 34 HARV. J. L. & PUB. POL’Y 951, 1004-05, 1032-33 (2011). The preamble’s acknowledgement of regulatory authority, however, explains the unique breadth of regulatory authority in this context/

SECOND AMENDMENT ORIGINALISM

When constitutional text is written at a high level of generality, original meaning will frequently be insufficient to resolve many interpretive questions. For this reason, even many originalists acknowledge that there are occasions on which original meaning is insufficient to resolve a constitutional debate, necessitating resort to what they label nonoriginalist “construction.”²¹² Nonoriginalists, for their part, cheerfully acknowledge that the interpretation of constitutional text must often be supplemented by judicially-created doctrine because of the inadequacy of the text to resolve any number of constitutional controversies.²¹³ Whether labeled “constitutional construction” or “living constitutionalism,” the frequently-acknowledged necessity to resort to nonoriginalist doctrine to address matters on which the Constitution’s text is inconclusive reflects the limits of originalism as a vehicle for constitutional adjudication.

The Second Amendment presents a case study in the limits of originalism. Even accepting *Heller*’s originalist methodology and its account of original meaning, originalism is of highly limited utility in developing Second Amendment jurisprudence. This observation surely leads one to question the utility of the originalist project – If even *Heller* cannot produce an authentically originalist jurisprudence, what might originalism offer constitutional adjudication? Perhaps the original meaning of constitutional text, when drafted at a high level of generality as is so often the case, is simply too abstract to offer much useful guidance for constitutional adjudication.²¹⁴ That seems to be the case with the Second Amendment, with its text offering only broadest hint at the relationship between right and regulatory power.

Consider, then, the possibilities that nonoriginalist construction offers for reconciling firearms rights and regulatory authority. Constitutional law is, after all, replete with instances of nonoriginalist construction. One type of nonoriginalist construction—the requirement that legislation have at least a rational basis (a standard that no one contends is rooted in original meaning)—was rejected by *Heller* as duplicative of other

constitutional protections that have been understood to require that challenged regulations have a rational basis.²¹⁵ Conversely, the most rigorous, if nonoriginalist, approach to judicial review is strict scrutiny, which requires that a challenged law “is justified by a compelling government interest and is narrowly drawn to serve that interest.”²¹⁶ Some commentators have argued for strict scrutiny on the view that it has long been regarded as appropriate for individual rights regarded as fundamental.²¹⁷ Yet, under many other provisions in the Bill of Rights the propriety of challenged regulations is not judged by strict scrutiny even if those rights are regarded as fundamental, as Adam Winkler has demonstrated.²¹⁸ In any event, the preamble provides textual and even originalist reasons to reject strict scrutiny.

The text of the Second Amendment, read in light of its preamble as well as the history of firearms regulation, powerfully suggests ample power to enact prophylactic regulations. Plainly, a “well regulated Militia” could well be one subject to a variety of prophylactic rules intended to minimize the likelihood of misconduct, rather than only to rules that punish misconduct after the fact. Indeed, we have seen prophylactic firearms regulation throughout history, from the early nineteenth-century prohibitions on concealed carry to the more recent prohibition on the possession of firearms by violent misdemeanants. This textual and historical commitment to regulation means an invariable requirement of strict scrutiny would be anomalous. For one thing, the myriad methodological difficulties in demonstrating the effect of any one regulation in isolation on crime rates would make it difficult to mount a convincing empirical demonstration that a particular regulation was narrowly tailored to achieve a compelling governmental interest.²¹⁹ For another, the narrow tailoring required by strict scrutiny forbids regulations that are significantly

over- or underinclusive.²²⁰ In the First Amendment context, for example, the Court has held that a statutory prohibition on corporate-funded electioneering could not be justified as a means to prevent corruption because the prohibition swept beyond the type of corrupt quid pro quo that the government has a compelling interest in preventing.²²¹ Yet, prophylactic regulations are necessarily over- or under-inclusive; for example, not all those who carry concealed weapons do so to commit crimes, and not all convicted felons recidivate.²²² Both the textual basis for and longstanding acceptance of prophylactic regulation, in short, strongly argue against an invariable requirement of strict scrutiny.

With the problems inherent to rational-basis review and strict scrutiny, and in light of the requirement that the militia must be “well regulated,” an intermediate form of review might prove tempting. Yet, *Heller* suggests that very serious burdens on the core constitutional interest in armed defense amount to a virtually per se infringement of the right to keep and bear arms. Beyond that, if original meaning is to set the boundaries for permissible nonoriginalist construction, a nonoriginalist construction must accommodate both the right found in the operative clause and the regulatory authority acknowledged in the preamble.

Accommodating a core right and legitimate regulatory interests is not a new problem in constitutional law. It has frequently been addressed through a methodology that assesses the extent of the burden placed on the core right by a challenged regulation. For example, the First Amendment protects the right to vote and participate in the political process, but there are nonetheless legitimate governmental interests that support regulation of the electoral process. The Court mediates between right and regulation by imposing strict scrutiny on regulations imposing what are regarded as severe burdens on First Amendment rights, while regulations imposing more modest burdens are upheld if reasonable.²²³ Thus, the Court evaluates regulations that compel

disclosure of the identities of those involved in the political process through a test that weighs the strength of the governmental interest in disclosure against the magnitude of the burden imposed on First Amendment rights.²²⁴ Similarly, content-neutral regulation of speech is upheld if it does not burden substantially more speech than necessary to further a legitimate governmental interest, an inquiry that turns in significant part on the magnitude of the burden imposed by the challenged regulation.²²⁵ And, because public employees have a constitutionally protected interest in speaking on matters of public concern, restrictions on public employee speech require heightened justifications to the extent that a challenged regulation imposes particularly great burdens on employee free speech.²²⁶

This mode of inquiry is not unique to free-speech jurisprudence. For example, while the Constitution secures both a right to travel and a right of access to the courts, the Court upheld a durational residency requirement to obtain a divorce because it imposed no absolute bar to travel or access to the courts, while advancing legitimate governmental interests in assuring that an individual has an adequate attachment to the forum state before it endeavors to adjudicate an action for divorce.²²⁷

Perhaps most familiar, however, is the Court's approach to abortion regulation, where the Court has been careful to protect both right and regulatory authority.²²⁸ In *Roe v. Wade*,²²⁹ the Court concluded that a woman had a cognizable liberty interest under the Due Process Clause in deciding whether to terminate her pregnancy,²³⁰ while acknowledging that the government had a legitimate interest in safeguarding health, maintaining medical

standards, and protecting potential life.²³¹ The Court endeavored to accommodate these conflicting interests by holding that after the first trimester the government may regulate abortion to protect maternal health, but may not regulate to protect potential life until viability.²³²

Subsequently, in *Planned Parenthood of Southeast Pennsylvania v. Casey*,²³³ the joint opinion of Justices O'Connor, Kennedy, and Souter concluded that this framework gave insufficient weight to the concededly legitimate governmental interest in protecting potential life by requiring that “any regulation touching upon the abortion decision must survive strict scrutiny, to be sustained only if drawn in narrow terms to further a compelling interest.”²³⁴ Instead, “[o]nly where state regulation imposes an undue burden on a woman's ability to make this decision does the power of the State reach into the heart of the liberty protected by the Due Process Clause.”²³⁵ Later, when upholding a statutory prohibition on “intact dilation and extraction” or “partial-birth abortion,” the Court explained that “[w]here it has a rational basis to act, and it does not impose an undue burden, the State may use its regulatory power to bar certain procedures and substitute others, all in furtherance of its legitimate interests in regulating the medical profession in order to promote respect for life”²³⁶ After concluding that the statute advanced this legitimate interest by banning “a procedure itself laden with the power to devalue human life,”²³⁷ the Court considered whether the statute created an undue burden in light of the “documented medical disagreement whether the Act’s prohibition would ever impose significant health risks on women,” and concluded that legislatures enjoy “wide discretion to pass legislation in areas where there is medical and scientific uncertainty.”²³⁸

Although none of these contexts is precisely analogous to firearms regulation, in each the Court confronted both a core right and a legitimate governmental interest in regulating the exercise of a right itself – not merely the type of incidental burden created by regulations not directed at the exercise of the right itself.²³⁹

SECOND AMENDMENT ORIGINALISM

Sufficiently serious burdens that threaten to negate the right are invalidated, or at least subjected to demanding review, while less serious burdens can be sustained under less demanding review.²⁴⁰ Accordingly, it is unsurprising that the emerging Second Amendment jurisprudence in lower courts since *Heller* has latched onto an inquiry into the extent of the burden imposed on core Second Amendment interests by a challenged regulation; this mode of nonoriginalist construction is familiar to constitutional law when right and legitimate regulatory authority must be reconciled.

Importantly, an approach that keys judicial scrutiny to the extent to which a challenged regulation burdens the core right has the virtue of minimizing the extent to which the judiciary must engage in difficult predictive or empirical judgments about the efficacy of challenged regulation.²⁴¹ Since very severe burdens are

deferential review. *See, e.g.*, *Rumsfeld v. Forum for Acad. & Instit. Rights, Inc.*, 547 U.S. 47, 67-68 (2006) (law requiring military access to law school recruiting series applied to schools who object to military policies); *Emp. Div. v. Albertini*, 472 U.S. 675, 688-89 (1985) (prohibiting individual from entering a military base applied to demonstrator).

²⁴⁰ This point likely explains the single case to embrace a rule of strict scrutiny for firearms regulation. In *Tyler v. Hillsdale Cnty. Sheriff's Dep't*, ___ F.3d ___, ___, 2014 WL 7181334 (6th Cir. 2014), the court utilized strict scrutiny to conclude that a federal prohibition on the possession of firearms by individuals who had been committed to a mental institution was unconstitutional as applied to an individual who had been committed decades earlier and who was unable to petition for relief from the disability because he resided in a state that offers no relief from this disability, at least absent evidence of the individual's current dangerousness. *See id.* at * 2-4, 18-22, 28-30. The statute at issue imposed a particularly severe burden on individuals subject to its prohibition absent a legislative determination that persons subject to the disability posed an unreasonable risk; indeed, the court stressed that Congress, by permitting states to offer relief from the statutory disability, "has *already* determined that the class of individuals previously committed to a mental institution is *not* so dangerous that all members must be permanently deprived of firearms." *Id.* at * 20. Thus, the court was likely correct to apply strict scrutiny to the case before it, even if its more general comments on the propriety of strict scrutiny cannot be reconciled with the scope of regulatory authority contemplated by the Second Amendment's preamble. Indeed, the court's opinion implies that it grasped that it is the extent and character of the burden imposed by a challenged regulation and not the standard of scrutiny alone that is critical to post-*Heller* jurisprudence. *See id.* at * 17 ("The courts of appeals' post-*Heller* jurisprudence does not suggest that the decision to apply intermediate scrutiny over strict scrutiny was generally the crucial keystone that won the government's case." (citations omitted)).

virtually per se invalid, little inquiry into their justification will be required beyond that typical in strict-scrutiny litigation, but for less severe burdens, a degree of deference to legislative judgment is appropriate. Not only does the Second Amendment reflect a textual commitment to regulation, the historical understanding of the Second Amendment reflects acceptance of prophylaxis. For example, persons thought to pose unreasonable risks have long been regarded within the ambit of regulatory power. Consider the framing-era limitation on the right to bear arms to loyal white males, the nineteenth-century prohibitions on carrying concealed firearms, and the more recent prohibitions on the possession of firearms by convicted felons and dangerous misdemeanants. After all, a militia could hardly be “well regulated” if it contained individuals regarded as presenting undue threats to public safety. Moreover, as courts applying *Heller* have concluded, difficulties in assessing the efficacy of prophylactic regulation and the long history of permitting such regulation without demanding rigorous empirical proof of efficacy suggest that deference should be given to legislative conclusions on questions of efficacy, except where regulations impose the most severe burdens on Second Amendment rights.²⁴²

All this may strike the reader as a bit abstract. For that reason, the discussion below applies this framework to some specific regulatory regimes. To be sure, there may be any number of policy and technological objections to the regulatory options considered below. Indeed, assessing the wisdom and utility of firearms regulation presents many challenges. And in addition to the formidable methodological challenges considered above,²⁴³ research into firearms-related violence has been handicapped by a variety of restrictions imposed on government funding for such research in recent years.²⁴⁴ “As a result, the past 20 years have witnessed diminished progress in understanding the causes and effects of firearm violence.”²⁴⁵ Accordingly, the state of the

research hampers that inquiry. Nevertheless, the remaining discussion will focus on a number of areas of potential regulation to illustrate that the Second Amendment, properly understood, tolerates quite a vigorous regime of gun control. The discussion is offered less as a concrete agenda than as a thought experiment to demonstrate the scope of regulatory authority that may be exercised consistent with the Second Amendment.

B. Assault-Weapons Bans

The character of constitutional review focusing on the extent to which a challenged restriction burdens the core constitutional interest in lawful armed defense is well illustrated by a prohibition on semi-automatic assault-type weapons with military features, especially large-capacity magazines.

There is some evidence that assault-type firearms and large-capacity magazines are disproportionately used by criminals,²⁴⁶ and some reason to believe that prohibiting weapons that enable unusual rates of fire or that accept unusually large magazines, as well as a prohibition on such magazines, “may prevent some shootings, particularly those involving high numbers of shots and victims.”²⁴⁷ Critics have argued, however, that because such weapons are commonly owned by civilians for purposes of self-defense, and do not meaningfully differ from other types of semi-automatic weapons, there is little point to a ban.²⁴⁸ Still, there is a case to be made for such laws. Although there is, unsurprisingly, little evidence of the efficacy of the now-lapsed federal ban on assault weapons given the ready availability of functional substitutes that were not prohibited by that law, there is some evidence that more comprehensive prohibitions on high-capacity semi-automatic firearms reduce firearms violence.²⁴⁹ Critics remain unpersuaded.²⁵⁰

Despite the uncertain empirical evidence on the efficacy of a comprehensive prohibition such weapons, there is a strong case to be made for their constitutionality. *Heller* ensures protection for

handguns with typical features, since handguns are “the quintessential self-defense weapon”²⁵¹ Thus, the burden on the core right of armed defense imposed by a prohibition on assault-type weapons is modest, as Professor Volokh, generally an advocate of expansive firearms rights, acknowledges: “[B]ans on such weapons don’t substantially burden the right to keep and bear arms for self-defense, precisely because equally useful guns remain available.”²⁵² Professor Volokh may be overstating things a bit; a weapon that can fire more rounds at a higher rate of speed may have some marginal utility for self-defense when compared to more traditional handguns.²⁵³ Still, in light of the modest burden that such a law likely imposes on lawful defense, and the potential benefits of such a prohibition, the approach that the Court has taken in other areas in which right and regulatory authority must be reconciled likely counsels for deference to the legislature’s judgment even in the face of uncertain evidence of efficacy.²⁵⁴

C. *Comprehensive Firearms Registration and Tracing*

There is a serious case to be made for a comprehensive system of registration enabling firearms, bullets, or cartridges recovered in connection with a crime to be readily traceable. Such a system could make it far easier to identify the perpetrators of firearms-related crime, and far more difficult for criminals to acquire untraceable weapons and circumvent background checks.

Under the current system of firearms tracing, when a firearm is recovered by the authorities in the course of a criminal investigation, only a crude system of tracing the firearm’s provenance is available. Law enforcement officials may request that the National Tracing Center perform a trace on a recovered firearm by contacting the manufacturer and requesting that it identify the transferee that received it from the manufacturer, and then contacting subsequent transferees until it identifies the first sale at retail made by a licensed dealer.²⁵⁵ As tracing became more

frequent in the 1990s, the utility of the trace database as a means of studying the illegal use of firearms increased.²⁵⁶

The utility of the trace database as a source of information for policy debate has been hampered in recent years as the consequence of a rider inserted into federal appropriations legislation prohibiting the release of trace data to the public.²⁵⁷ Even so, the trace data that is available offers some important insights. In particular, studies have consistently found that traced firearms are rarely recovered from those who bought the firearms at retail from a licensed dealer. For example, an analysis of crime gun trace requests during calendar year 2000 in cities with populations greater than 250,000 participating in a crime-gun interdiction initiative indicated that of the trace requests in which both the purchaser and possessor at the time of recovery could be ascertained, in 88% the possessor and purchaser were not the same person.²⁵⁸ A study of 1999 traces similarly found that only 11.2% of guns were recovered from the original buyer.²⁵⁹

This pattern is also reflected in surveys of offenders. A survey of federal prisoners who used or carried a firearm during their offense of conviction found that 9.1% of inmates reported obtaining the firearm from a theft or burglary, 15.0% from a drug dealer, 8.7% from a fence or the black market, 35.4% from a family member or friend, and 3.4% reported that the firearm was either borrowed or given to them, while only 22.5% reported obtaining the gun from a retail transaction, either through a retail store (15%), a pawnshop (4.2%), a flea market (1.7%) or a gun show (1.7%).²⁶⁰ Even if we assume, unrealistically, that all the retail sales were made by a licensed dealer, the vast majority of firearms were obtained elsewhere. This pattern is also reflected in

other surveys of offenders, which have consistently found that the vast majority of firearms in the hands of offenders were not purchased from a licensed dealer.²⁶¹

The existing regulatory scheme does much to explain offenders' preferences for acquiring firearms outside of licensed dealers. As one study explained:

It is easy to understand why offenders would prefer private sellers over licensed firearms dealers. Under federal law and laws in most states, firearms purchasers require no background check or record keeping. The lack of record keeping requirements helps to shield an offender from law enforcement scrutiny if the gun were used in a crime and recovered by the police. Indeed, in the offenders in the [Survey of Inmates of State Correctional Facilities] who were not prohibited from possessing a handgun prior to the crime leading to their incarceration, two-thirds had obtained their handguns in a transaction with private sellers.²⁶²

There is also some evidence, based on both surveys and trace data, that newer guns are disproportionately represented among firearms used by criminals.²⁶³ In any event, it seems plain that there must be vigorous demand for firearms among offenders: "Each new cohort of violent criminals must obtain guns somewhere."²⁶⁴

Thus, the vast majority of armed offenders are able, without undergoing background checks, to obtain guns that cannot be traced to them. Consider, as a response to this state of affairs, a system of comprehensive firearms registration and tracing that might be adopted. All owners of firearms would be required to register them, and all new sales and other transfers would be registered as well. Registration data would be placed in a comprehensive database, and all subsequent transfers would be

performed through a licensed dealer required to perform a background check and then register the transfer should the transferee prove eligible to possess firearms. Unregistered transfers would incur significant penalties, as would the failure to report the loss or theft of a firearm. Penalties could be enhanced if such a firearm were subsequently used in a crime. Moreover, whenever a firearm was transferred, it could be test-fired and the unique rifling impressions left on the bullet or cartridge casings could be recorded in a national database that could be matched to bullets or casings recovered at crime scenes.²⁶⁵ New firearms and ammunition could also be microstamped with a unique serial number that could be recovered from spent ammunition or casings.²⁶⁶ Finally, to guard against the possibility of theft, the law might require that firearms be kept securely locked except when in the actual possession of their owners.²⁶⁷ There could also be a requirement that new firearms be equipped with technology that renders them inoperable except when in the possession of their owner.²⁶⁸

This type of regulatory regime could have dramatic consequences for firearms-related crime. It would become far more difficult for offenders to acquire untraceable firearms if there

were a credible threat of sanctions not only against any individual found without a properly registered firearm, but also against any individual who transferred a firearm to another without registering it, or who failed to report a lost or stolen firearm. After all, whenever a firearm is recovered in a criminal investigation from someone other than the registered owner, the registered owner would face sanctions if he had failed to report the transfer, loss, or theft of the firearm. Firearms trafficking outside of licensed dealers would likely diminish greatly. Moreover, if all registered firearms produced traceable bullets or cartridges, there would be enormous risks in discharging firearms, not unlike leaving fingerprints or DNA at the scene of the crime. Presumably such a system would greatly increase demand among criminals for older, unregistered firearms, but the resulting increase in price should produce a dampening effect on this illegal market, especially given the risks that would be run by those who transfer older firearms without registering the transfer. The limited empirical evidence available suggests that more stringent systems of regulation that currently operate to increase the risks inhering in supplying guns later used in crimes reduce the flow of firearms to criminals.²⁶⁹

What is particularly striking from a constitutional standpoint about such a regime of comprehensive regulation and tracing is that there is so little basis to challenge it under the Second Amendment. The classic objection to gun registration is that it is the first step toward confiscation.²⁷⁰ Although this kind of slippery-slope argument is familiar in legal discourse, there is widespread agreement that the existence of a constitutional right that stakes out an end-point of an otherwise slippery slope is one

mechanism to defeat this type of claim.²⁷¹ *Heller* functions in just this fashion; by securing an individual right to keep and bear arms, it undercuts a claim that registration could lead to confiscation.²⁷² Moreover, registration has ample originalist support; in the framing era, militia laws frequently required individuals to produce their firearms at muster and have them registered.²⁷³

Beyond that, a comprehensive system of registration and tracing imposes negligible burden on the core interest in lawful armed defense central to *Heller* because it does not limit the ability of individuals to use a properly licensed firearms for lawful purposes.²⁷⁴ Comprehensive registration also enhances the efficacy of regulations that validly prohibit classes of individuals, such as convicted felons, from possessing firearms.²⁷⁵ Moreover, a registration requirement that enhances traceability of recovered firearms, bullets, and casings makes it far riskier to use firearms unlawfully, and imposes little burden on lawful defensive uses of firearms as long as systems of registration and tracing can be implemented without dramatic increases in the cost of firearms or the time it takes to acquire one. Similarly, safe-storage laws impose little burden on armed defense as long as the firearms may lawfully remain available and readily operable when in the presence of the owner.²⁷⁶ Abortion jurisprudence, for example,

instructs: “The fact that a law which serves a valid purpose, one not designed to strike at the right itself, has the incidental effect of making it more difficult or more expensive to procure an abortion cannot be enough to invalidate it.”²⁷⁷ It is hard to understand why this rule should not have equal application to the Second Amendment in light of the is a textual basis for regulatory authority.²⁷⁸

In sum, a system of comprehensive firearms registration and tracing, far more aggressive than anything on the current regulatory horizon, faces little in the way of a constitutional threat.

D. Carrying Firearms in Public

Another important question is the scope of regulatory authority over those who carry firearms in public. *Heller* observes: “From Blackstone through the 19th-century cases, commentators and courts routinely explained that the right [to keep and bear arms] was not a right to keep and carry any weapon whatsoever in any manner whatsoever and for whatever purpose.”²⁷⁹ While some persons carry firearms for lawful purposes, others carry firearms with different ends in mind.

For example, there is considerable evidence that members of criminal street gangs carry firearms at elevated rates.²⁸⁰ The same is true of those involved in drug trafficking.²⁸¹ This should not be

surprising; those engaged in unlawful but intensively competitive enterprises will often turn to violence as a means of enhancing their position in illegal, if lucrative, markets. There is ample evidence that homicide spiked in major cities following the introduction of crack cocaine, which created new competitive opportunities and pressures.²⁸² The prevalence of violent competition, in turn, is likely to increase the rate at which offenders carry firearms.

Indeed, gang researchers have found that the prevalence of violence in gang-dominated neighborhoods serves to make firearms more pervasive in those communities.²⁸³ Researchers have similarly found that a perception of danger in high-crime neighborhoods becomes a stimulus for the carrying of firearms as a means of self-protection.²⁸⁴ As Jeffrey Fagan and Deanna Wilkinson's ethnographic study of at-risk youth in New York explains, when inner-city youth live under the increasing threat of violence in an environment in which firearms are prevalent, not only are they more likely to arm themselves, but they become increasingly likely to respond to real or perceived threats and provocations with lethal violence, creating what Fagan and Wilkinson characterize as a contagion effect.²⁸⁵ A study of homicide in New York, for example, found evidence of what it

characterized as a contagion effect, in which firearms violence stimulated additional firearms-related violence in nearby areas.²⁸⁶ Fagan and Wilkinson have labeled this phenomenon an “ecology of danger” in which the need to carry firearms and be prepared to use them came to be seen as essential.²⁸⁷ Ironically, this does not make those who carry firearms in high-crime neighborhoods safer; to the contrary, even though gang members carry firearms at elevated rates, they also experience vastly higher homicide victimization rates than the public at large.²⁸⁸

Gang members also appear to experience other forms of violent victimization at elevated rates. See, e.g., Chris L. Gibson et al., *Using Propensity Score Matching to Understand the Relationship between Gang Membership and Violent Victimization: A Research Note*, 26 JUSTICE Q. 624, 639-41 (2012). Related are several other points of empirical debate. First, some have claimed that laws entitling individuals to carry concealed firearms have produced reductions in crime. See, e.g., JOHN R. LOTT, JR., MORE GUNS, LESS CRIME 170-336 (3d ed. 2010); John R. Lott & David B. Mustard, *Crime, Deterrence, and Right-To-Carry Concealed Handguns*, 26 J. LEG. STUD. 1 (1997). This conclusion has been subject to fierce criticism. See, e.g., NAT’L RES. COUNCIL, FIREARMS AND VIOLENCE: A CRITICAL REVIEW 125-51 (Charles F. Wellford et al. eds., 2005); DAVID HEMENWAY, PRIVATE GUNS, PUBLIC HEALTH 100-04 (2004); SPITZER, *supra* note 118, at 69-73; TUSHNET, *supra* note 219, at 85-95; Ian Ayres & John J. Donohue III, *Yet Another Refutation of the More Guns, Less Crime Hypothesis—With Some Help from Moody and Marvell*, 6 ECON J. WATCH 35 (2009). Even a leading firearms-rights advocate has pronounced the evidence in support of this theory unpersuasive. See Kleck, *supra* note 250, at 1411-15. In any event, even the advocates of this view make no claim that it applies in high-crime, urban neighborhoods where levels of drug- and gang-related violence are common. As we have seen, for example, gang members and drug traffickers carry firearms at elevated rates but also experience elevated rates of homicide victimization. Similarly, the fact that permit-holders under existing schemes seem unlikely to commit crimes does not necessarily apply if a robust Second Amendment right ultimately made the right to carry available to a far broader class of individuals. A related claim is that firearms are used for defensive purposes at very high rates. See, e.g., GARY KLECK, TARGETING GUNS: FIREARMS AND THEIR CONTROL 193-211 (1995). Other work has cast great doubt on this claim. See, e.g., PHILIP J. COOK & JENS LUDWIG, U.S. DEP’T OF JUSTICE, GUNS IN AMERICA: NATIONAL SURVEY ON PRIVATE OWNERSHIP AND USE OF FIREARMS 8-11 (May 1997); HEMENWAY, *supra*, at 66-69, 239-40; SPITZER, *supra* note 118, at 64-65. In any event, again, even the advocates of

SECOND AMENDMENT ORIGINALISM

It seems to follow that police tactics to make it more difficult and risky for offenders to carry guns in public would reduce the risk of violent confrontation and increase the difficulties facing criminal enterprises engaged in violent competition. Indeed, there is something approaching consensus among criminologists that one of the very few interventions that consistently reduces rates of violence crime involves aggressive patrol targeting statistical concentrations of crime and focusing on finding guns.²⁸⁹ For this reason, I have elsewhere argued that an important factor in New York City's efforts at driving down violent crime so effectively is

this view do not claim that it operates to make high-crime neighborhoods safer. To the contrary, there is good reason to suspect that the prevalence of firearms in such neighborhoods, rather than producing a reduction in crime, has produced the drive-by shooting, which is a common tactic of criminal street gangs. See, e.g., H. Range Hutson et al., *Drive-by Shootings by Violent Street Gangs in Los Angeles: A Five-Year Review from 1989 to 1993*, 3 ACAD. EMERGENCY MED. 300, 302 (1996); H. Range Hutson et al., *Adolescents and Children Injured or Killed in Drive-by Shootings in Los Angeles*, 330 NEW ENG. J. MED. 324, 324 (1994). When gang members believe that an intended target may be armed, they are more likely to employ this tactic because it enables them to both approach and leave the target quickly and enjoy the benefits of tactical surprise. See WILLIAM B. SANDERS, *GANGBANGS AND DRIVE-BYS: GROUNDED CULTURE AND JUVENILE GANG VIOLENCE* 65–74 (1994); James C. Howell, *Youth Gangs: An Overview*, in *AMERICAN YOUTH GANGS AT THE MILLENNIUM*, *supra* note 280, at 16, 36–37. Finally, some argue that history suggests that racial and other minorities have found firearms of particular value for purposes of self-defense, although these claims are unaccompanied by empirical evidence that the use of firearms have enabled minorities to achieve acceptable (or even enhanced) levels of personal security. See, e.g., Robert J. Cottrol & Raymond T. Diamond, *The Second Amendment: Toward an Afro-Americanist Reconsideration*, 80 GEO. L.J. 309, 349-58 (1991); Nicholas Johnson, *Firearms Policy and the Black Community: An Assessment of Modern Orthodoxy*, 45 CONN. L. REV. 1491, 1516-53 (2012). The persistence of high rates of firearms-related crime and its contagion effects instead suggest a powerful argument to the contrary.

its restrictive gun-control laws, which are enforced through an aggressive stop-and-frisk regime targeting statistical hot spots of crime aimed at “suspicious bulges” and other indications that a suspect is unlawfully carrying firearms, tactics which effectively make it prohibitively risky to carry guns or drugs at hot spots.²⁹⁰ There is in fact substantial evidence that stop-and-frisk tactics targeting these statistical hot spots have played an important role in New York’s crime decline,²⁹¹ even if there may be some evidence that in recent years, the tactic has perhaps reached if not exceeded the point of diminishing returns, at least in New York.²⁹²

If the Second Amendment conferred a right to carry firearms in public, however, the ability to execute a stop-and-frisk strategy aimed at driving guns off the streetscape would be sharply circumscribed, if not altogether eliminated. The Fourth Amendment’s prohibition on unreasonable search and seizure, for example, permits the use of stop-and-frisk tactics only when an officer reasonably believes that criminal activity is afoot.²⁹³ If the Second Amendment granted individuals a right to carry firearms in public, the Fourth Amendment would necessarily prohibit search and seizure based on no more than reason to believe that an individual was armed.²⁹⁴ Even if a permit were required to carry firearms in public places, if the Second Amendment were understood to require that permits be made liberally available, the Fourth Amendment could well prohibit any form of investigative detention to determine if an individual reasonably believed to be carrying firearms had the proper permit, just as it forbids the police to stop vehicles to determine if the driver possess the requisite

license and registration.²⁹⁵ It is quite unclear, for example, that merely observing an armed individual in public, even in a high-crime area, would supply an adequate basis to stop and question that individual based on reasonable suspicion that he lacked the requisite permit. Even aside from these problems, a sophisticated criminal organization might be able to acquire permits authorizing some of its members to carry firearms in public. In short, a broad Second Amendment right to carry firearms in public would likely pose a substantial inhibition on the ability of the authorities to prevent violent crime by making it risky to carry guns in public and thereby to disrupt Fagan and Wilkinson’s “ecology of danger” in high-crime neighborhoods.

One can question, however, whether *Heller* has any application outside of the home. *Heller* indicates that the interest in lawful armed defense is particularly compelling in “the home, where the need for defense of self, family, and property is most acute.”²⁹⁶ Some commentators, stressing these points as well as the enhanced regulatory interests that come into play when firearms are brought into public places, argue that Second Amendment rights do not extend outside the home.²⁹⁷

Yet, there is some historical precedent for protecting the right to carry firearms in public, at least openly, although the rationale

²⁹⁵ See *Delaware v. Prouse*, 440 U.S. 648, 655-63 (1979) (stops of vehicles to check license and registration violate the Fourth Amendment in the absence of probable cause or at least reasonable suspicion that the driver does not have proper license and registration or has committed some other offense). See also *City of Indianapolis v. Edmond*, 531 U.S. 32, 40-48 (2000) (roadblocks in high-crime areas where all vehicles are stopped and checked for guns and drugs violate the Fourth Amendment). Laws prohibiting possession of firearms by convicted felons are similarly of limited efficacy. Laws targeting possession or carrying of firearms by only convicted felons are also of limited efficacy. One leading study found that only about 43% of adult homicide offenders in Illinois had a prior felony conviction. See Philip J. Cook, Jens Ludwig & Anthony A Braga, *Criminal Records of Homicide Offenders*, 294 JAMA 598 (2005). Another found that about 41% of adults arrested for felony homicide and just 30% of adults arrested for all felonies in Westchester County, New York, had a prior felony conviction, and just 33% of all adults arrested for felonies in New York State had a prior felony conviction. See Philip J. Cook, *Q&A on Firearms Availability, Carrying, and Misuse*, 14 N.Y. ST. BAR ASS’N GOV’T L. & POL’Y J. 77, 80 (2012). Thus, even assuming officers on patrol can effectively enforce these laws by somehow identifying convicted felons on the streetscape through tactics consistent with the Fourth Amendment, these laws would permit many offenders to remain armed, and perhaps even stimulate the recruitment of younger individuals without criminal records by drug traffickers and criminal street gangs.

for distinguishing between open- and concealed-carry seems to have little contemporary application.²⁹⁸ Still, the historical evidence is in conflict; there is some historical precedent for prohibitions on even carrying firearms openly.²⁹⁹ Moreover, as Saul Cornell has noted, virtually all the nineteenth-century laws and judicial decisions drawing a distinction between concealed- and open-carry were in the south, where the need to carry arms may have been regarded as greater given the prevalence of slavery, while in the north broader prohibitions on carrying arms in public seem to have been generally regarded as within the scope of the police power.³⁰⁰ In the face of this cacophony, the historical evidence that seemingly supports a right to carry firearms in public, at least openly, offers little in the way of a reliable basis for resolving the constitutionality of a law prohibiting the carrying of firearms in public.

To be sure, a blanket ban on carrying firearms in public seems difficult to reconcile with *Heller*'s account of the original meaning of the Second Amendment. *Heller* concluded that the original meaning of the right to "bear" arms meant the right to "carry[] for a particular purpose – confrontation."³⁰¹ Of course, many if not most "confrontations" occur outside the home; the most natural understanding of the right to "bear" or carry arms is not limited to the interior of the home. This inference is reinforced by *Heller*'s caution that its holding does not "cast doubt on . . . laws forbidding the carrying of firearms in sensitive places such as schools or government buildings" ³⁰² This dictum, of course, suggests that in locations other than "sensitive places," the Second Amendment confers a right to carry firearms.

As for the historical evidence, Judge Posner reached this conclusion:

[A] right to keep and bear arms for personal self-defense in the eighteenth century could not rationally have been limited to the home. Suppose one lived in what was then the wild west One would need from time to time to leave one's home to obtain supplies from the nearest trading post, and en route one

would be as much (probably more) at risk if unarmed as one would be in one's home unarmed.³⁰³

The import of this discussion in terms of original meaning is debatable; although arms were surely carried outside the home with frequency on the frontier, it is unclear whether this was regarded as a matter of right, or merely because legislative restriction of the right to carry arms was regarded as unwarranted in unsettled areas. After all, in frontier towns strict gun control often took hold.³⁰⁴ But, implicit in Judge Posner's discussion is perhaps the most important reason to reject a view of Second Amendment rights that limits firearms to the home: *Heller* tells us that the Second Amendment codified a right of lawful armed defense, and the need to defend oneself is not limited to the home.³⁰⁵

Still, one might question how much weight *Heller* should receive on this point. Recall that *Heller* sought only "to enjoin the city from enforcing the bar on the registration of handguns . . . and the trigger-lock requirement insofar as it prohibits the use of 'functional firearms within the home.'"³⁰⁶ Accordingly, discussion in *Heller* of whether Second Amendment rights extend outside the home was dictum unnecessary to the decision. Beyond that, in response to the argument that the phrase "bear arms" was ambiguous because it often referred to carrying arms in military service, in *Heller* the Court concluded that this phrase "unequivocally bore that idiomatic meaning only when followed by the preposition 'against,' which was in turn followed by the target of the hostilities."³⁰⁷ Significantly, this stops short of a claim that the phrase was unambiguous; indeed, the Court acknowledged that "the phrase was often used in a military context"³⁰⁸ Even on the Court's limited claim, Professor Cornell has argued that the historical evidence on this point was not nearly as clear as portrayed by the Court.³⁰⁹ One post-*Heller* review of the historical evidence identified ample evidence that the phrase "bear

arms” often had a military meaning in the framing era even when not followed by “against.”³¹⁰

Thus, in an appropriate case in which the contours of the right to “bear” arms are at issue, the Court may be warranted in revisiting the question whether the phrase “bear arms” is sufficiently ambiguous to warrant resort to the preamble as an interpretive aid. And, to the extent that the phrase “bear arms” is ambiguous, resort to the preamble is of particular importance to perform what *Heller* called the preamble’s “clarifying function.”³¹¹ This suggests that when it comes to the right to bear, or carry firearms—a right not squarely at issue in *Heller*—the regulatory authority contemplated by the preamble is of particular force.³¹²

In any event, the rationale supporting the nineteenth-century distinction between concealed and open-carry has little contemporary resonance. Since the original meaning of the Second Amendment, unlike the Seventh, does not preserve framing-era practice, legislatures should have the freedom to reach some other accommodation between the right and regulatory power beyond one based on a now-obsolete historical distinction between the dangers posed by concealed and open-carry. A complete prohibition on carrying operable firearms in any public place renders the Second Amendment right to bear, or carry, firearms for self-defense nugatory, or nearly so, and might well be

State*, 2 Tenn. 154, 1840 WL 1554, * 3 (1840) (“The words ‘bear arms,’ too, have reference to their military use, and were not employed to mean wearing them about the person as part of the dress.”).

³¹¹ 554 U.S. at 578.

³¹² This does not mean that *Heller* was necessarily wrong to recognize an individual right to bear arms outside of a military context. As *Heller* observed, treating the phrase “bear arms” as an idiomatic reference to the use of arms in a military context creates anomalies: “Giving ‘bear Arms’ its idiomatic meaning would cause the protected right to consist of the right to be a soldier or to wage war – an absurdity that no commentator has ever endorsed. Worse still, the phrase “keep and bear Arms” would be incoherent. The word ‘Arms’ would have two different meanings at once: ‘weapons’ (as the object of “keep”) and (as the object of ‘bear’) one-half of an idiom. It would be rather like saying ‘He filled and kicked the bucket’ to mean ‘He filled the bucket and died.’” *Id.* at 586-87 (citation omitted). There is no anomaly, however, in relying on the preamble to inform the interpretation of the scope of the right to bear arms even in a nonmilitary context; as we have seen, *Heller* also concluded that the term “militia” as it appeared in the preamble, referred to all citizens able to keep and bear arms, and not only the members of a formal military organization. Thus, the preamble does not compel the conclusion that only the carrying of firearms in connection with service in an organized militia is protected by the operative clause.

difficult to justify.³¹³ But less complete prohibitions that require individuals to obtain a permit and demonstrate particularized need to carry a firearm for self-defense have been upheld by most courts to consider the question.³¹⁴

On this point, however, judicial opinion is divided; a panel of the Ninth Circuit concluded that in a state where open-carry is prohibited, San Diego's policy allowing applicants to obtain a concealed-carry permit only on a showing of particularized need to carry firearms for self-defense violates the Second Amendment because it does not "allow[] the typical responsible, law-abiding citizen to bear arms in public for the lawful purpose of self-defense."³¹⁵ It added that "[t]he challenged regulation does no more to combat [the state's public safety concerns] than would a law indiscriminately limiting the issuance of a permit to every tenth applicant."³¹⁶ The panel cautioned, however, that it "consider[ed] the scope of the right only with respect to responsible, law-abiding citizens," adding that "[w]ith respect to irresponsible or non-law abiding citizens, a different analysis – which we decline to undertake – applies."³¹⁷ This qualification was presumably compelled by *Heller's* admonition that it "[d]id not read the Second Amendment to protect the right of citizens to carry arms for *any sort* of confrontation, just as we do not read the First Amendment to protect the right of citizens to speak for *any purpose*."³¹⁸

Yet, the panel's claim that it need not concern itself with the question whether "irresponsible or non-law abiding citizens" might carry firearms if all applicants must be given permits without any

special showing of need misses the point of prophylactic regulation. While the criminal history of an applicant for a carry permit can be readily ascertained, whether he is a “responsible, law abiding citizen,” as well as the actual “purpose” for which he seeks to carry, are not so easy to know. There is, of course, a considerable likelihood that some individuals who are not “responsible, law-abiding citizens” will obtain concealed-carry permits if permits must be issued to anyone not disqualified by a prior conviction and who proclaims a generalized desire to carry firearms for self-defense.³¹⁹ This is precisely the context in which the case for prophylactic regulation is strongest, given the inevitable error rate that inheres in any effort to make predictive judgments about persons who wish to carry firearms in public, especially when applicants proclaim only a generalized and conclusory interest in carrying firearms for lawful purposes. Carrying firearms in public, moreover, represents the context in which the safety of third parties is most plainly implicated. And, as we have seen, both the Second Amendment’s preamble and the history of firearms regulation suggest that the right to bear arms permits a wide variety of prophylactic regulations, and argues for a measure of deference to legislative assessments of the efficacy of and justification for such regulation.

Using a showing of particularized need protects Second Amendment rights in cases in which the core constitutional interest in lawful self-defense is most plainly implicated, supplying an administrable basis to decide whether applicants are likely to be “responsible, law-abiding citizens,” while denying applications that present substantial risk of error. This criterion is probably as reliable as the nineteenth-century criterion of requiring open carry to determine the likely purpose for which firearms are carried and a good deal better suited to the contemporary urban landscape. Although prohibiting only concealed carry may have been a reasonable approach to identifying those individuals most likely to be carrying firearms for an improper purpose in the nineteenth century, that rationale has little contemporary application.³²⁰ And a constitutional requirement that licenses must be liberally granted could well produce potent Fourth Amendment limitations on the ability of the authorities to stop armed individuals and determine whether they are properly licensed, further undermining prophylactic policing.³²¹

³¹⁹ As we have seen, the available data indicates that most homicide offenders, for example, do not have prior felony convictions. *See supra* note 295.

SECOND AMENDMENT ORIGINALISM

Equally important, the view that rigorous permit requirements operate as a rationing system fails to acknowledge that when the law enables police to keep guns off the streets in high-crime urban hot spots, the likelihood of violent confrontations that prove fatal is reduced. In these areas, it may be effectively impossible to have a “well regulated militia” if everyone expressing a generalized interest in carrying firearms for self-defense who is not disqualified by a prior conviction can carry firearms “in case of confrontation.”³²² Conversely, a system in which either open or concealed-carry must be permitted could prove constitutionally vulnerable precisely because it might do little to keep guns off the streets and thereby reduce firearms-related crime, at least if the Second Amendment is understood—not unreasonably—to require that a challenged enactment make some meaningful contribution to public safety.³²³

Especially in high-crime jurisdictions riven by gang and drug crime, carrying firearms in public may be unaccompanied by unacceptable risks, and for that reason, warrant prophylactic restriction.³²⁴ Indeed, there is a long tradition of more restrictive firearms regulation in urban areas.³²⁵ If the Second Amendment permitted the development of concealed-carry prohibitions directed at those who carried firearms under circumstances that were thought to pose unacceptable risks, surely the Second Amendment permits as well regulations directed at what are properly regarded, under contemporary conditions, as circumstances posing unacceptable risk. Given the difficulty in assessing the purpose of someone carrying firearms in public, a requirement that an individual be licensed and demonstrate some special need to carry the firearm serves a far more important public purpose than the now largely outdated judgment that law-abiding persons are more likely to engage in open and not concealed carry. Such an

³²² *Heller*, 554 U.S. at 592.

³²³ Some have speculated that a preference for open-carry might advance public safety because of social pressure that could reduce the prevalence of carrying firearms if they must be carried openly. See Sarosy, *supra* note 313, at 500-01. There is, however, little relevant empirical evidence on this point. See generally James Bishop, Note, *Hidden or on the Hip: The Right(s) To Carry after Heller*, 97 CORNELL L. REV. 907, 922-26 (2012) (noting the absence of data on the effects of concealed as opposed to open-carry). Moreover, outside of middle class communities in which openly-carried firearms might offend prevailing sensibilities, this assumption may well have little purchase; indeed, in high-crime communities, open-carry might well be welcomed by those most likely to be carrying for unlawful purposes.

approach has the added benefit of preserving the ability of the police to take action to stop and search individuals who they reasonably suspect to be unlawfully armed and dangerous. This is the kind of “discipline” to which a well-regulated militia would surely submit.

* * *

Dissenting from the Court’s decision to apply the Second Amendment to the state and local gun-control laws in *McDonald v. City of Chicago*,³²⁶ Justice Stevens wrote: “[F]irearms have a fundamentally ambivalent relationship to liberty. Just as they can help homeowners defend their families and property from intruders, they can help thugs murder innocent victims.”³²⁷ One need not agree with Justice Stevens’s ultimate conclusion in *McDonald* to acknowledge his point. *Heller* upheld a Second Amendment right to carry firearms, but sentencing enhancements for criminals who carry firearms have been invariably upheld as well.³²⁸ It is hard to think of any other constitutional right the exercise of which could be used as a sentencing enhancement, yet this result seems entirely consistent with *Heller*’s admonition that the Second Amendment “[i]s not a right to keep and carry any weapon whatsoever in any manner whatsoever and for whatever purpose.”³²⁹ *Heller*’s originalism confirms the linkage between right and regulation, but it offers little more aid in evaluating the justification for a challenged regulation under circumstances so radically different than those that prevailed at the framing. A largely nonoriginalist common law of the Second Amendment must inevitably develop to reconcile right and regulation in twenty-first century America. That process is already well under way in the lower courts.

All that said, history tells us something important about the Second Amendment. Firearms rights and regulation have always been twinned: in the English Bill of Rights; the Second Amendment’s preamble and operative clause; and in the evolving history of firearms regulation. Indeed, no right is more Janus-faced than the right to keep and bear arms. Thus goes the constitutional case for gun control.
