

National Institutes of Health (NIH)

National Institutes of Health (NIH) (New Guidance)

Effective January 25, 2022, NIH requires awardees to report all relevant activities and resources in support of the investigator's research endeavors on the required Other Support (OS) form to ensure transparency and to assess potential scientific, budgetary, and/or commitment overlap and the capacity of the individual to carry out the research as proposed. This guidance change includes the requirement of all Investigators to electronically sign their Other Support pages to confirm that the information contained in that documentation is true and complete. NIH has also revised instructions for the completion of Biographical Sketches for inclusion in proposals submitted on or after January 25, 2022.
