Advice
Take the leap and start your involvement early. It is possible to get a good job right out of college with a social science degree, and research involvement is a huge part of that, as it will set you apart from other applicants and can give you a focused skill set.

Current Research
My research credit is focused around learning how to use SPSS, a common software program for statistical analysis. I work with a data set obtained through surveys of civilian and military college students spanning from 2002 to 2017. I learn how to use SPSS to find answers within the data to questions I have. Through using various functions on the program, I can find simple statistics that gave me an understandable conclusion from all of the individual survey responses. Once I found a noteworthy conclusion, I would graph or chart all the relevant data to be published online for the general public. I also worked to find creative and simple ways to display the information I had found. Finally, I would describe the results, note why it was relevant, and present a theory on why they appear as they do.

Involvements
- Peace Studies Union (President)
- Student Scholar Ambassador

Awards & Distinctions
- Dean's List (2017-2019)
