Advice
Just do it! There’s a plethora of things to gain from getting involved in undergraduate research, from meeting new people to gaining valuable experiences to developing critical skills. Worst case scenario, you simply find out that research isn’t for you; best case scenario (and arguably more likely), you discover a new passion that has the potential to become a life-long interest and possible career pathway.

Current Research
As an undergraduate research assistant at Chapman’s Institute for Interdisciplinary Brain and Behavioral Sciences, I am interested in the rapidly growing subfield of neuroscience known as neurolaw, which looks at how neuroscience can be of relevance to the law. Specifically, I am intrigued by questions that explore how our increasing understanding of the human brain can inform the ways we approach criminal justice.

Involvements
- The Brain Institute
- Student Scholar Ambassador
- Department of Student Engagement

Awards & Distinctions
- 2020 SURF Fellow

Conferences
- Student Scholar Symposium
