Overview

Chapman University engaged SSRS to conduct the 2025 wave of The Chapman University Survey on American Fears (CSAF). Chapman University initiated this nationwide poll on what strikes fear in Americans in 2014. The primary objective of this survey is to collect annual data on the fears, worries and concerns of Americans, the personal, behavioral and attitudinal characteristics related to those fears, and how those fears are associated with other attitudes and behaviors.

The CSAF is a project of the Earl Babbie Research Center in the Wilkinson College of Arts, Humanities, and Social Sciences at Chapman University. The Earl Babbie Research Center is dedicated to using a variety of social science research methods to examine critical social, behavioral, economic and environmental problems.

The CSAF was conducted online via the SSRS Opinion Panel and invited adults age 18 and older to participate via the web. It included 1,015 participants and data collection was conducted from March 24 to April 8, 2025.

This report provides information about the sampling procedures and the methods used to collect, process, and weight data for the 2025 wave of the CSAF.

SSRS Profile

SSRS is a full-service survey and market research firm managed by a core of dedicated professionals with advanced degrees in the social sciences, who partner with clients interested in conducting high-quality research. SSRS designs and implements research solutions for complex strategic, tactical, public opinion, and policy issues in the U.S. and in more than 40 countries worldwide. The SSRS team specializes in creative problem-solving and informed analysis to meet its clients' research goals. SSRS provides the complete set of analytical, administrative and management capabilities needed for successful project execution. In the industry, SSRS is renowned for its sophisticated sample designs and its experience with all facets of data collection, including those involving multimodal formats. SSRS also has extensive statistical and analytical capabilities for extracting important insights from the survey data and suggesting strategies based on those insights.

Sample Design: The SSRS Opinion Panel

SSRS Opinion Panel members are recruited randomly based on nationally representative ABS (Address Based Sample) design (including Hawaii and Alaska). ABS respondents are randomly sampled by Marketing Systems Group (MSG) through the U.S. Postal Service's Computerized Delivery Sequence File (CDS), a regularly-updated listing of all known addresses in the U.S. For the SSRS Opinion Panel, known business addresses are excluded from the sample frame. Additional panelists are recruited via random digit dial (RDD) telephone sample of cell phone numbers

connected to a prepaid cell phone. This sample is selected by MSG from the cell phone RDD frame using a flag that identifies prepaid numbers. Prepaid cell numbers are associated with cell phones that are “pay as you go” and do not require a contract.

For the CSAF, all panelists participated via web by self-administering the survey.¹ The Weighting section of this report details the non-Internet Adjustment applied to ensure weighted data are projectable to the full U.S. population.

Questionnaire Design

Chapman University provided the survey instrument to SSRS. SSRS reviewed the survey instrument and provided feedback. Together, SSRS and the Chapman University team worked to finalize the questionnaire.

Upon final approval, SSRS formatted and programmed the survey for completion online. Additional steps were employed to ensure a quality experience in survey administration regardless of the device utilized by respondents, whether a desktop computer, tablet, or mobile device. The survey program was optimized for administration via smartphone or other mobile handheld devices. The survey program was also checked on multiple devices, including desktop computers and handheld mobile devices, and different web browsers to ensure consistent and optimized visualization across devices and web browsers. The survey was accessed directly by respondents, using their unique survey links with embedded passwords. This also gave them the ability to return to their survey later if they chose to suspend their survey.

Data Collection

Survey Sampling

All sample members drawn for the CSAF were adult, English-language panelists. The sample for the CSAF was drawn using a probability proportional to size (PPS) methodology to ensure adequate representation of each demographic group while minimizing the variability of the final weights.

Survey Administration Procedures

Surveys conducted for the CSAF are self-administered web surveys. Reminders are sent to panelists who do not complete the survey after being sent the initial invitation.

¹ The SSRS Opinion Panel is a multi-mode panel. Internet households participate via web, while all non-Internet households (including those who have Internet but are unwilling to take surveys online) can participate via phone.

For the CSAF study, the survey administration schedule was as follows:

Touchpoint	Date
Soft launch invitation	3/24/2025
Full launch invitation	3/25/2025
Field close	4/8/2025

A “soft launch” inviting a limited number of panelists to participate was conducted on March 24th. Soft launch data was checked to ensure functionality of the program. After checking soft launch data to ensure that all questionnaire content and skip patterns were correct, additional sample was released to ensure the final sample met the study goals.

The median length of the CSAF survey was 12 minutes.²

Panelists were emailed an invitation to complete the CSAF survey online. The email for each respondent included a unique password-embedded link. In appreciation for their participation, panelists received post-paid compensation in the form of an electronic gift card, sent via email immediately after completion of the survey.

In total, 1,999 panelists were sent email invitations with their own unique link to the survey. Targeted reminders were implemented for non-responding sample in order to stay aligned with population demographics. Panelists who had opted to receive text messages from the SSRS Opinion Panel received text message reminders. The survey administration schedule was as follows:

Touchpoint	Date
Soft launch	3/24/2025
First email invitation	3/25/2025
First email and text reminder	3/27/2025
Second reminder	3/29/2025
Third reminder (email and text)	4/03/2025
Fourth reminder	4/06/2025
Field close	4/08/2025

As a standard practice for SSRS Opinion Panel surveys, quality checks were incorporated into the survey. For the CSAF, these included questions aimed at ensuring attentiveness and sincerity of response: asking respondents to select a specific response when viewing a list of items (attentiveness measure) and asking respondents about experiences involving impossible or extremely unlikely contexts (sincerity measure). Additionally, the number of skipped questions, the length of interview, and the number of “straight-lined” questions per respondent were analyzed. Straight-lining refers to a respondent selecting the same answer option for all questions

² The mean length of the survey was 13 minutes and the modal length was 10 minutes.

in a series. Surveys completed by respondents which failed any of these four quality-control checks (attentiveness/sincerity questions, high rate of non-response, short survey length, and the number of straight-lined series) were closely reviewed on a case-by-case basis. Respondents who failed the substantive data-review (n=6) were not included in the final data set.

Respondents were allowed to skip any question they did not wish to answer; however, high rates of non-response can be correlated with poor data quality. Notably, 97% of respondents answered 100% of all survey questions, with no one completing less than 91% of the entire questionnaire.

N Sampled for Survey	N Completed Survey	Final N After Quality Control Removals
1,999	1,021	1,015

Completion Rate/Response Rate

Web-panel response rates are a product of (1) response rates to the original invitation to participate as a panelist and (2) the response rates, among panelists, to the invitation to participate in the study. The table, below, details the completion and response rates for this study.

Touchpoint	
Invited to participate/Total sample	1,999
Completed	1,015 ³
Survey completion rate	51%
AAPOR RR3	2% ⁴

Data Processing and Integration

SSRS implemented several quality assurance procedures in data file preparation and processing. In addition to extensive testing of the web survey prior to the launching data collection, random data were generated to ensure that skip patterns were working correctly. After the soft launch, survey data were carefully checked for accuracy, completeness, and non-response to specific questions so that any issues could be identified and resolved prior to the full launch.

The data file programmer implemented a “data cleaning” procedure in which web survey skip patterns were created in order to ensure that all questions had the appropriate numbers of cases. This procedure involved a check of raw data by a program that consisted of instructions derived from the skip patterns designated on the questionnaire. The program confirmed that data were

³ Excludes cases removed for quality-control reasons.

⁴ Product of the SSRS Opinion Panel recruitment rate(s) and the CSAF survey completion rate(s) across sample-sources. This takes into consideration the response rate for the panel recruitment survey, percent of recruitment survey respondents that agree to join the panel, and the CSAF survey’s response rate.

consistent with the definitions of codes and ranges and matched the appropriate bases of all questions.

Weighting

Data were weighted to represent the residential adult population of the United States. The weighting involves multiple stages, reflecting the nature of sampling for probability-based panels. First, to account for recruitment into the panel, a base weight is created for the entire SSRS Opinion Panel. Then, a study-level base weight is created by adjusting this panel-wide base weight for the probability of selection into the individual study. Finally, to create the final weight, the study-level data is raked to parameters for the study's target population.

Panel-Wide Base Weight

The panel-wide base weight adjusts for the SSRS Opinion Panel recruitment and retention process—specifically, differential probabilities of being selected for the recruitment sample, completing the registration survey, joining the Panel, and remaining on the Panel.

Recruitment Design Weight

The design weight accounts for differential probabilities of selection for the recruitment sample. The design weight for the SSRS Opinion Panel was computed differently depending on whether the panelist was recruited from address-based sample (ABS), a prepaid cell sample, or the SSRS dual-frame RDD telephone Omnibus.

ABS Recruits

The design weight for ABS recruits corrects for the disproportionate ABS design by adjusting the distribution of sample across the ABS strata to match the distribution of the ABS frame across strata.

ABS recruits come from a variety of sample sources, some of which employ different stratification schemes. The design weight for ABS recruits is tailored to the stratification scheme used for the sample from which the panelist was recruited. Currently, ABS recruitment waves for the SSRS Opinion Panel are stratified on a combination of geographic region and model-based indicators of the presence of key subpopulations.

Prepaid Cell Recruits

The design weight for prepaid cell recruits accounts for any disproportionate sampling of prepaid cell phone numbers from the cell phone RDD frame.

Telephone Omnibus Recruits

The design weight for the telephone Omnibus recruits is their original base weight computed at the time of the original omnibus interview. This base weight accounts for selection probabilities associated with the overlapping dual-frame Omnibus sample design.⁵ This base weight is a function of the landline and cell frame sample sizes as well as each respondent's telephone usage and number of adults in the household.

Recruitment, Non-Response, and Attrition Adjustments

Two adjustments are applied to the recruitment design weight:

- A nonresponse adjustment correcting for variability in the recruitment response rate.
- An attrition adjustment correcting for variability in the rate at which originally recruited panelists are retained on the Panel.

Both steps use a weighting class adjustment in which adjustment cells are defined by a cross of the recruitment channel and geographic strata.

For ABS recruits, a household size adjustment is also applied to correct for the sampling of one adult within each sampled address.

Non-Internet Adjustment

In addition to the design weight, a non-Internet Adjustment (NIA) was made to the sample. For this adjustment, SSRS applies a model-based propensity score adjustment to make adults with Internet access representative of all adults (regardless of whether or not they have Internet access). Propensity scores are estimated by modeling panel response mode on a range of demographic, attitudinal and behavioral covariates. The model is a conditional inference tree built in R using the *partykit* package.

Panel-Wide Raking

To create the final panel-wide base weight, the full panel is raked to target parameters for the population of U.S. adults (ages 18+). Panel-wide raking parameters include gender, age, educational attainment, race/ethnicity, Census division, civic engagement, population density, Internet use frequency, voter registration status, party identification, religion, household size, and home tenure. This raking step uses panelist profile variables; missing data in these variables is filled in using hot decking prior to raking.

⁵ Buskirk T.D., Best J. (2012) Venn Diagrams, Probability 101 and Sampling Weights Computed for Dual Frame Telephone RDD Designs. *Journal of Statistics and Mathematics*. Vol. 15: 3696–3710.

Study-Level Base Weight

The study-level base weight adjusts for differential probabilities of selection from the SSRS Opinion Panel into the sample for this specific study. The study-level base weight is calculated as:

$$PABW * \frac{N_h}{n_h}$$

where *PABW* is the Panel-wide base weight calculated as described above; and, for each stratum *h*, *N_h* is the number of panelists available and *n_h* is the number invited into the study.

Study-level sampling strata were formed from quantiles of *PABW*, with higher-weight panelists being given a higher probability of selection.

Study-Level Calibration

With the study-level base weight applied, the data were weighted to balance the demographic profile of the sample to the target population parameters⁶.

Weighting was accomplished by raking sample distributions to target population distributions using iterative proportional fitting. This procedure balances each calibration variable to target benchmarks individually and iteratively. The entire set of calibration variables is cycled through until the weights converge across all dimensions.

Data were weighted to distributions of: sex by age, sex by education, age by education, detailed education, race/ethnicity, census region, home tenure, number of adults per household, civic engagement, population density, political party identification⁷, voter registration, religious affiliation, and Internet use frequency.

⁶ Missing data in the raking variables were imputed using hot decking. Hot deck imputation replaces the missing values of a respondent randomly with another similar respondent without missing data.

⁷ The party ID used in weighting is measured at a time matching the NPORS data release, not at the time of this survey.

The following table shows the data sources used for calibration parameters.

DIMENSIONS	SOURCE
Sex	2024 Current Population Survey ⁸
Age	
Education	
Race/Ethnicity	
Census region	
Home tenure	
Number of adults per household	
Population density	Claritas Pop-Facts Premier 2023 ⁹
Religious affiliation	Pew Research Center's National Public Opinion Reference Survey (NPORS) ¹⁰
Internet use frequency	
Political Party Identification	
Civic engagement ¹¹	September 2023 CPS Volunteering and Civic Life Supplement ¹²
Voter registration	CPS 2022 Voting and Registration Supplement ¹³

Weights were trimmed at the 2nd and 98th percentiles to prevent individual interviews from having too much influence on survey-derived estimates.

Effects of Sample Design on Statistical Inference

Post-data collection statistical adjustments require analysis procedures that reflect departures from simple random sampling. SSRS calculates the effects of these design features so that an appropriate adjustment can be incorporated into tests of statistical significance when using these data. The so-called "design effect" or *deff* represents the loss in statistical efficiency that results

Integrated Public Use Microdata Series, Current Population Survey: Version 12.0 [dataset]. Minneapolis, MN: IPUMS, 2024. <https://doi.org/10.18128/D030.V12.0>

¹³ Sarah Flood, Miriam King, Renae Rodgers, Steven Ruggles, J. Robert Warren, Daniel Backman, Annie Chen, Grace Cooper, Stephanie Richards, Megan Schouweiler and Michael Westberry. IPUMS CPS: Version 11.0 [dataset]. Minneapolis, MN: IPUMS, 2023. <https://doi.org/10.18128/D030.V11.0>

from a disproportionate sample design and systematic non-response. SSRS calculates the composite design effect for a sample of size n , with each case having a weight, w , as:¹⁴

$$deff = \frac{n \sum w^2}{(\sum w)^2}$$

The total sample design effect for this survey is 1.35.

The survey's margin of error is the largest 95% confidence interval for any estimated proportion based on the total sample — the one around 50%. For example, the margin of error for the entire sample is ± 3.6 percentage points. This means that in 95 out of every 100 samples drawn using the same methodology, estimated proportions based on the entire sample will be no more than 3.6 percentage points away from their true values in the population. Margins of error for subgroups will be larger. It is important to remember that sampling fluctuations are only one possible source of error in a survey estimate. Other sources, such as respondent selection bias, questionnaire wording, and reporting inaccuracy, may contribute additional error of greater or lesser magnitude.

Deliverables

Final deliverables for this study were a weighted SPSS file, the final formatted questionnaire, and this methodology report.

For the final datafile, please note that when a respondent elected to skip a question they were coded as "-1: Web blank." A codebook is provided below.

Datafile Variables and Codebook

The following shows the name and description of each data variable and associated response categories provided in the SPSS file.

Variable Name	Variable Description
RESPID	RESPID. Respid
LENGTH	LENGTH. Interview length in minutes
DEVICETYPE	Device used for survey completion
Q1	Q1. How religious do you consider yourself to be?
Q2	Q2. How often do you attend religious services at a church, mosque, synagogue or other place of worship?
Q3	Q3. Which one statement comes closest to your personal beliefs about the Christian Bible?
Q23_A	Q23_A. How often do you seek religious guidance from the following sources? - Social media such as TikTok, Instagram, or Facebook
Q23_B	Q23_B. How often do you seek religious guidance from the following sources? - Podcasts
Q23_C	Q23_C. How often do you seek religious guidance from the following sources? - Online videos such as those on YouTube
Q23_D	Q23_D. How often do you seek religious guidance from the following sources? - A religious leader such as a minister, priest, rabbi, or imam
Q4	Q4. How would you describe yourself politically?
Q5	Q5. Do you think of yourself as Republican, Democrat or Independent?
VOTE2020	VOTE2020. Did you vote in the 2020 presidential election?
Q6	Q6. Which presidential candidate did you vote for in 2020?
VOTE2024	VOTE2024. Did you vote in the 2024 presidential election?
Q6A	Q6A. Which presidential candidate did you vote for in 2024?
Q21D	Q21D. Thinking about recent elections, how often have you relied on advice from religious leaders when deciding which candidate or party to support?
Q7_A	Q7_A. How often do you...? - Read a local newspaper from your hometown, print or online?
Q7_B	Q7_B. How often do you...? - Read a national newspaper, print or online, such as USA Today, The Wall Street Journal, or The New York Times?
Q7_C	Q7_C. How often do you...? - Watch Fox News?
Q7_D	Q7_D. How often do you...? - Watch CNN?
Q7_E	Q7_E. How often do you...? - Watch MSNBC?

Q7_F	Q7_F. How often do you...? - Watch the local TV news?
Q7_G	Q7_G. How often do you...? - Listen to a podcast that discusses politics?
Q7_H	Q7_H. How often do you...? - Get news from social media?
Q8_A	Q8_A. How afraid are you of the following? - Becoming seriously ill
Q8_B	Q8_B. How afraid are you of the following? - People I love becoming seriously ill
Q8_C	Q8_C. How afraid are you of the following? - Dying
Q8_D	Q8_D. How afraid are you of the following? - People I love dying
Q9_A	Q9_A. How afraid are you of the following? - Air pollution
Q9_B	Q9_B. How afraid are you of the following? - Pollution of drinking water
Q9_C	Q9_C. How afraid are you of the following? - Pollution of oceans, rivers and lakes
Q9_D	Q9_D. How afraid are you of the following? - Extinction of plant and animal species
Q9_E	Q9_E. How afraid are you of the following? - Oil spills
Q9_F	Q9_F. How afraid are you of the following? - Global warming and climate change
Q10_A	Q10_A. How afraid are you of the following? - Not having enough money for the future
Q10_B	Q10_B. How afraid are you of the following? - Not being able to pay off the college debt of myself or a family member
Q10_C	Q10_C. How afraid are you of the following? - Not having enough money to pay my rent or mortgage
Q10_D	Q10_D. How afraid are you of the following? - Being unemployed
Q10_E	Q10_E. How afraid are you of the following? - High medical bills
Q10_F	Q10_F. How afraid are you of the following? - Catching influenza (the seasonal flu)
Q10_G	Q10_G. How afraid are you of the following? - Becoming disabled
Q11_A	Q11_A. How afraid are you of the following? - Artificial Intelligence (AI) replacing people in the workforce
Q11_B	Q11_B. How afraid are you of the following? - Technology that I don't understand
Q11_C	Q11_C. How afraid are you of the following? - Cyber-terrorism
Q11_D	Q11_D. How afraid are you of the following? - Corporate tracking of personal data

Q11_E	Q11_E. How afraid are you of the following? - Government tracking of personal data
Q12_A	Q12_A. How afraid are you of the following events? - A devastating earthquake
Q12_B	Q12_B. How afraid are you of the following events? - A devastating hurricane
Q12_C	Q12_C. How afraid are you of the following events? - A devastating tornado
Q12_D	Q12_D. How afraid are you of the following events? - A devastating flood
Q12_E	Q12_E. How afraid are you of the following events? - A devastating blizzard/winter storm
Q12_F	Q12_F. How afraid are you of the following events? - A devastating drought
Q12_G	Q12_G. How afraid are you of the following events? - A devastating wildfire
Q12_H	Q12_H. How afraid are you of the following events? - A new pandemic or a major epidemic
Q12_I	Q12_I. How afraid are you of the following events? - Climate change impacting where I live
Q13_A	Q13_A. How afraid are you of the following events? - The collapse of the electrical grid
Q13_B	Q13_B. How afraid are you of the following events? - A nuclear accident/meltdown
Q13_C	Q13_C. How afraid are you of the following events? - Economic/financial collapse
Q13_D	Q13_D. How afraid are you of the following events? - Widespread civil unrest
Q13_E	Q13_E. How afraid are you of the following events? - The U.S. becoming involved in another world war
Q13_F	Q13_F. How afraid are you of the following events? - Whites no longer being the majority in the U.S.
Q13_G	Q13_G. How afraid are you of the following events? - Illegal immigration
Q13_H	Q13_H. How afraid are you of the following events? - Violent overthrow of the U.S. government
Q13_I	Q13_I. How afraid are you of the following events? - Biological warfare
Q13_J	Q13_J. How afraid are you of the following events? - A terrorist attack
Q13_K	Q13_K. How afraid are you of the following events? - North Korea using nuclear weapons

Q13_L	Q13_L. How afraid are you of the following events? - Iran using nuclear weapons
Q13_M	Q13_M. How afraid are you of the following events? - Russia using nuclear weapons
Q14_A	Q14_A. How afraid are you of the following? - Needles
Q14_B	Q14_B. How afraid are you of the following? - Sharks
Q14_C	Q14_C. How afraid are you of the following? - Flying
Q14_D	Q14_D. How afraid are you of the following? - Heights
Q14_E	Q14_E. How afraid are you of the following? - Public speaking
Q14_F	Q14_F. How afraid are you of the following? - Small, enclosed spaces
Q14_G	Q14_G. How afraid are you of the following? - Strangers
Q14_H	Q14_H. How afraid are you of the following? - Walking alone at night
Q14_I	Q14_I. How afraid are you of the following? - Homeless tent encampments
Q14_J	Q14_J. How afraid are you of the following? - Homeless people
Q15_A	Q15_A. How afraid are you of being the victim of the following crimes? - Murder by a stranger
Q15_B	Q15_B. How afraid are you of being the victim of the following crimes? - Murder by someone you know
Q15_C	Q15_C. How afraid are you of being the victim of the following crimes? - Sexual assault by a stranger
Q15_D	Q15_D. How afraid are you of being the victim of the following crimes? - Sexual assault by someone you know
Q15_E	Q15_E. How afraid are you of being the victim of the following crimes? - Racial/hate crime
Q15_F	Q15_F. How afraid are you of being the victim of the following crimes? - Random/mass shooting
Q15_G	Q15_G. How afraid are you of being the victim of the following crimes? - Theft of property
Q15_H	Q15_H. How afraid are you of being the victim of the following crimes? - Identity theft
Q15_I	Q15_I. How afraid are you of being the victim of the following crimes? - Credit card fraud
Q15_J	Q15_J. How afraid are you of being the victim of the following crimes? - Terrorism
Q16_A	Q16_A. How afraid are you of the following? - Government use of drones within the U.S.
Q16_B	Q16_B. How afraid are you of the following? - Corrupt government officials

Q16_C	Q16_C. How afraid are you of the following? - Government restrictions on firearms and ammunition
Q17_A	Q17_A. Please indicate your level of agreement with the following statements. - The situation for people with disabilities is good as it is.
Q17_B	Q17_B. Please indicate your level of agreement with the following statements. - Disabled people are demanding too much from the rest of society.
Q17_C	Q17_C. Please indicate your level of agreement with the following statements. - There have been enough societal efforts in favor of people with disabilities.
Q20_A	Q20_A. Please indicate your level of agreement with the following statements. - Homeless people should be allowed to live on the streets or in tents.
Q20_B	Q20_B. Please indicate your level of agreement with the following statements. - Adequate shelter space should always be made available for homeless people.
Q20_C	Q20_C. Please indicate your level of agreement with the following statements. - Homeless people living on the streets or in tents should go to jail if they refuse shelter space.
Q20_D	Q20_D. Please indicate your level of agreement with the following statements. - Homeless people with mental illnesses and/or substance use disorders should have more access to treatment.
Q20_E	Q20_E. Please indicate your level of agreement with the following statements. - Families should receive governmental financial support to care for their homeless family members.
Q20_F	Q20_F. Please indicate your level of agreement with the following statements. - There should be more affordable housing made available to help homeless people.
Q19_Q19a_GROUP	Q19_Q19a_GROUP. Group assignment variable for being shown Q19 or Q19a
Q19	Q19. Please indicate your level of agreement with the following statement. Violence is sometimes an acceptable way for Americans to express their disagreement with the government.
Q19A	Q19A. In a situation where you think force or violence is justified to advance an important political objective, how willing would you personally be to use force or violence to damage property?
Q18_A	Q18_A. Please indicate your level of agreement with the following statements. - The federal government should declare the U.S. to be a Christian nation.

Q18_B	Q18_B. Please indicate your level of agreement with the following statements. - U.S. laws should be based on Christian values.
Q18_C	Q18_C. Please indicate your level of agreement with the following statements. - If the U.S. moves away from our Christian foundations, we will not have a nation anymore.
Q21_A	Q21_A. Please indicate your level of agreement with the following statements. - On political issues, the advice of religious leaders should outweigh one's own feelings.
Q21_B	Q21_B. Please indicate your level of agreement with the following statements. - Religious leaders are a reliable source of guidance on political issues.
Q21_C	Q21_C. Please indicate your level of agreement with the following statements. - Ministers and religious leaders should not try to influence how their congregations vote in political elections.
Q22_A	Q22_A. Please indicate your level of agreement with the following statements. The government is concealing what it knows about - The South Dakota crash
Q22_B	Q22_B. Please indicate your level of agreement with the following statements. The government is concealing what it knows about - The JFK assassination
Q22_C	Q22_C. Please indicate your level of agreement with the following statements. The government is concealing what it knows about - The moon landing
Q22_D	Q22_D. Please indicate your level of agreement with the following statements. The government is concealing what it knows about - The Illuminati/New World Order
Q22_E	Q22_E. Please indicate your level of agreement with the following statements. The government is concealing what it knows about - Mass shootings such as those at Sandy Hook, Las Vegas, and Parkland
